Dr. Jae-Hun Yang received B.Sc (1997) in Chemistry from Hanyang University, and M.Sc (1999) Ph.D (2005) in Chemistry from Seoul National University supervised by Prof. Jin-Ho Choy. After graduating, he worked at Prof. Kwon's group, Sungkyunkwan University (2005-2007), and Prof. Domen's group of the University of Tokyo (2007-2009) as a postdoc. Then he moved to Nanospace Co. Ltd. And worked as a researcher (2009-2011). From 2012 to March 2017, he worked as a research professor at the Center for Intelligent Nano-Bio Materials (CINBM) at Ewha Womans University. Since April 2017, he has been working at Prof. Vinu Group, UniSA as a research associcate. His research interests focus on nanoporous materials and 2-dimensional nanohybrids between layered inorganics and organics or bio-molecules or inorganics as heterogeneous catalysts (especially photocatalysts), drug delivery carriers, nano-filler in polymer nanocomposites for green energy and environmental application and bio-medical application.
