Would you anticoagulate?

A. Yes

B. No

2019 AF Guidelines and Anticoagulation

Class of Recommendation	Level of Evidence	Anticoagulation Recommended For:
I	A, B	Patients with NVAF and an elevated CHA2DS2-VASc score of 2 or greater in men or 3 or greater in women, oral anticoagulants are recommended. Options include: • Warfarin (LOE: A) (S4.1.1-5–S4.1.1-7) • Dabigatran (LOE: B) (S4.1.1-8) • Rivaroxaban (LOE: B) (S4.1.1-9) • Apixaban (LOE: B) (S4.1.1-10), or • Edoxaban (LOE: B-R) (S4.1.1-11)
IIb	C	Patients with NVAF and a CHA2DS2-VASc score of 1 in men and 2 in women, prescribing an oral anticoagulant to reduce thromboembolic stroke risk may be considered (S4.1.1-31–S4.1.1-35).

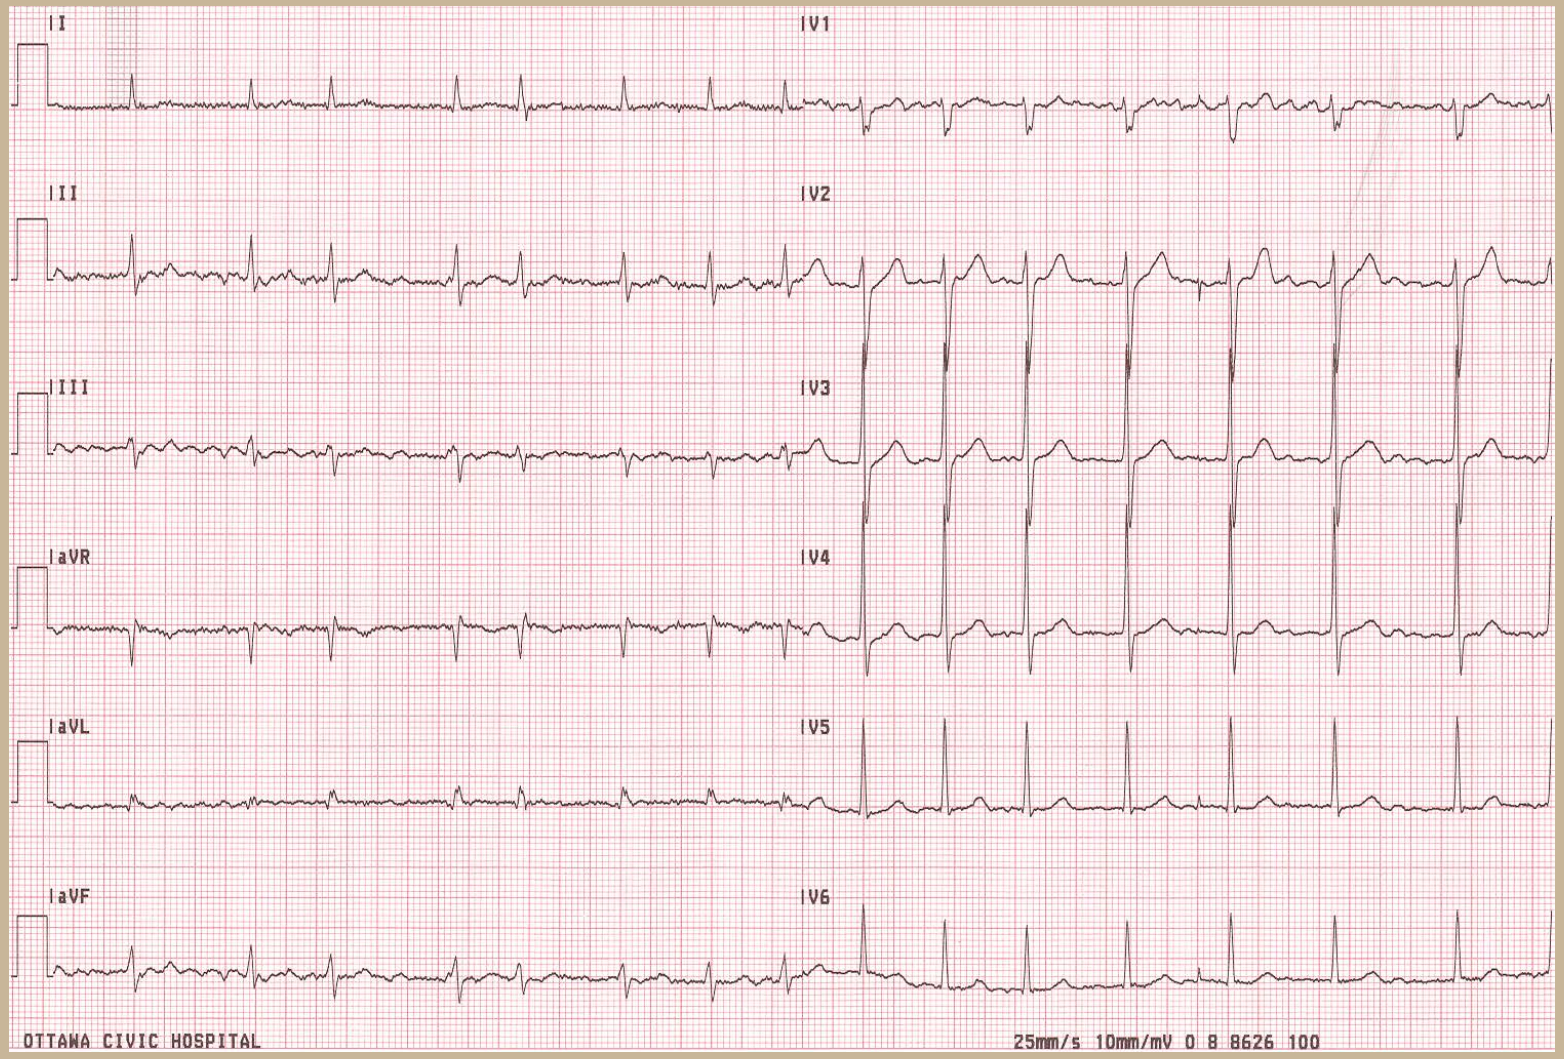
What is Atrial Fibrillation?



AF Terminology

- Silent AF
- Sub-clinical AF (SCAF)
- Device Detected AF
- CIED Detected AF
- AHREs

SCAF Detected by Cardiac Devices

- Would not be detected by means other than a device with continuous (24/7) long-term recording
- Is usually asymptomatic
- Episodes are usually short in duration (minutes to hours)
- The specificity of CIED-detected AHREs differs
  - Between individual devices
  - Improves as episode duration exceeds several hours
  - Specificity even lower with ILRs which do not have an atrial lead

What percentage of CIED patients have subclinical AF?

A. 10%

B. 20%

C. 30%

D. 50%

E. 70%

Incidence of AF Detected in the Implanted Device Population

Year	Trial	Device Indication	Clinical Profile of Patients	Incidence of Newly Detected AF
2002	Gillis et al.[46]	PPMs for sinus node disease	All	157/231 (68%)
2003	MOST[47]	PPMs for sinus node disease	All	156/312 (50%)
2010	TRENDS[33]	PPMs and ICDs All indications	History of prior stroke No history of AF No OAC use ≥1 stroke risk factor	45/163 (28%)
2012	TRENDS[32]	PPMs and ICDs All indications	No history of prior stroke No history of AF No OAC use ≥1 stroke risk factor	416/1368 (30%)
2012	ASSERT[31]	PPMs and ICDs All indications	History of hypertension No history of AF No OAC use	895/2580 (34.7%)
2013	Healey et al.[48]	PPMs All indications	All	246/445 (55.3%)

ASSERT II: AHRE episodes are common

ASSERT II: ILR implantation in 256 patients enrolled for research purposes (mean age 74 years, mean CHADSVASC score 4.1)

	AF as a Risk Marker	AF as a Direct Cause
Concept	 • AF is a stroke risk marker that is epidemiologically associated with stroke, not necessarily always causative	AF directly leads to LAA thrombus formation and risk of cardioembolic stroke Implications for the definition of a critical AF threshold	• Need to determine sufficient burden/duration of AF that associates with risk	• How much AF is needed to promote LAA thrombus formation? • Need to determine temporal relationships, burden, etc.
Therapeutic implications	• AF burden less important • Treat AF along with other risk factors • Minimal role for rhythm control as a stroke reduction strategy • Anticoagulation should not be stopped post ablation	• Role for "pill in the pocket" anticoagulation? • Role for rhythm control as a strategy for stroke reduction? • Role for continuous monitoring/tracking of PAF burden?

INNOVATION

NAVIGATE ESUS Study Stopped Early Due to Comparable Efficacy in Treatment Arms

Phase III study evaluated rivaroxaban versus aspirin in patients with embolic stroke of undetermined source with no atrial fibrillation

Study unlikely to show benefit of rivaroxaban versus aspirin if it were to be completed

RARITAN, NJ (October 5, 2017) – Janssen Research & Development, LLC and its development partner Bayer today announced the Phase III NAVIGATE ESUS study, evaluating the efficacy and safety of XARELTO® (rivaroxaban) for the secondary prevention of stroke and systemic embolism in patients with a recent embolic stroke of undetermined source (ESUS), is stopping early for futility. This decision is based on the recommendation of the study's Independent Data Monitoring Committee (IDMC) as the trial showed comparable efficacy between rivaroxaban and the standard of care, aspirin, and little chance of rivaroxaban showing an overall benefit versus aspirin if the study were to be completed. While bleeding rates were very low overall and within the expected range, an increase in bleeding was observed in the rivaroxaban arm compared to aspirin.

ESUS refers to patients with embolic stroke of unknown origin in whom common causes such as atrial fibrillation and carotid artery stenosis have been excluded. It is estimated to affect approximately 500,000 people in the United States annually.

Subsequent publication: N Engl J Med 2018; 378:2191-22

IMPACT:

Tailored Anticoagulation vs. Usual Care in Patients With AHRE

2718 CIED patients with AHRE, median CHA_2DSVA_2SC score 4, randomized to no anticoagulation (usual care) or anticoagulation initiated at times of AHRE and continued for 30 / 90 days (depending on CHA_2DSVA_2SC)

	OAC	No OAC
Stroke	0.7%	1.3%
Bleed	1.6%	1.2%
Death	5.4%	5.1%

NCT01938248

Patients with:
- **SCAF (at least 1 episode ≥ 6 min but none > 24 hrs)**
- **CHA_2DS_2-VASc score ≥ 3**
- **No clinical AF, contraindication or requirement for anticoagulation**

CONSENT and RANDOMIZE

Active aspirin
81mg qd
+
Placebo apixaban bid

Active apixaban
5mg or 2.5mg bid
+
Placebo aspirin qd

<u>Primary Efficacy Outcomes:</u>
Stroke (including TIA with imaging)
Systemic Embolism

<u>Primary Safety Outcomes:</u>
Major Bleeding

Flow chart of NOAH – AFNET 6

Inclusion criteria

Age > 65 and one additional CHA_2DS_2VASc factor

and

documented atrial high rate episode > 6 mins

Exclusion criteria

conventionally diagnosed AF indication for oral anticoagulation contraindication for NOAC therapy

R

Oral anticoagulation therapy (NOAC) with Edoxaban

ASA or placebo

Primary outcome:

stroke, systemic embolism, or cardiovascular death

Clinicaltrials.gov NCT02618577

Conclusions

- AF burden is relevant to stroke risk.
  - Threshold for risk? Continuum of risk?
- SCAF/AHREs are VERY common and increase risk (< clinical AF)
- Reasons for weak temporal relationship between AF episodes and stroke events?
- Differential impact of AF burden and various CHA2DS2-VASc scores?
- ARTESiA and NOAH may provide some answers.
