%100 SS Kevlar
- **Stage 5** *All Facings are with BFXX Brass Button clutch.*
Underground Racing Twin Turbo Systems & Trofeo Cars & Challenge cars
%100 BFXX

- 1- The Pega Clutch uses the stock OEM-type pressure-plate New or Used and is intended for use with the OEM Factory Flywheel
- 2- These kits are "amazing" per our customers that are currently using them and all clutches are dyno tested. We have had great success with these and they are very street able and holding big power up to higher RPM.
- 3- Pega Clutch Kit offers a full face Kevlar clutch disc which has proven longevity and OEM Street ability. This in turn eliminates the chance of premature failure due to clutch disc glazing which occurs in OEM and competitor disc kits that have a regular organic disc lining.
- 4- Identical if not better OEM pedal feel. With Kevlar you will not believe what happens to your car...
- 5- With Kevlar Clutch up date you can be longer in traffic than OEM Organic Clutch. Batter Natural to 1. Gear shifting and faster 1. to 2. As well 3. to 4. Gear changes in higher RPMs 8500 up to 18000 RPM (Dyno tested)
- 6- Completely plug and play just like the OEM.
- 7- With Kevlar Great street ability and Racing use.
- 8- It is a complete kit including new rebuild or used rebuild up to OEM Spec`s. If in acceptable rebuild range read the Sale Policy. Price will vary by the New OEM clutch to Kevlar, if you do not send you old one to be rebuild.
- 9-Save thousands of Euros with the rebuild Pega Clutch disc kits by installing a greater clutch! No more babying a high performance car in fear of burning the clutch use Pega Clutch...
- 10- Use Pega Clutch...
