

Fertilizer Performance on Turf Enhanced With C20™

Case Study #9:

“Feed the soil microbes that feed your plants”

Photo courtesy, Green Life Supply, Burnsville, Minnesota

Turf grass color and density is significantly improved on the turf where the soil has been treated with C20™.

The whole cemetery was treated with fertilizer. One treatment of C20™ was then applied to a plot of turf next to the fence in the summer of 2015. The rest of the cemetery was not treated with C20™. The enhancement in turf grass color and density remained differentiated throughout the fall.

C20™ is ideal for treating trees, shrubs, and flowering plants in yards, gardens and landscapes.
