

MICROBLADING
- AFTERCARE INSTRUCTIONS -

NEXT APPOINTMENT TIME & DATE

BROWS ON FLEEK

Please follow these instructions for at least 5 days after the procedure to improve and prolong the results of your brows. If instructions are not followed it can greatly affect your microblading results!

Avoid getting the area wet for up to 14 days, which includes keeping your face dry during a shower. If your eyebrows get wet during the healing process, pat them dry with a towel, DO NOT RUB.

Avoid saunas, swimming, and excessive sweating until the area is completely healed and you have a follow-up appointment.

Do not expose treated area to direct sunlight. No sun-tanning or salon tanning. After healed (30 days), use a sunscreen to avoid fading from the sun.

No makeup should be applied directly on the brows during the healing process. Avoid using daily skincare products directly on the eyebrows.

Do not touch, rub, pick or scratch your brows following treatment or during healing process. You may find that your eyebrows will scab or become slightly dry following the treatment. If they itch, DO NOT SCRATCH them.

Apply any medicated cream or healing balm as directed by your technician.

To maintain results try to schedule a "touch-up" of your microbladed eyebrows at least once a year.

If you have any unexpected problems with the healing of the skin please contact your cosmetic professional to discuss further instructions.
