

The Evolution of Lyme Disease Confirmation Testing - The Viramed Biotech AG Borrelia B31 ViraChip® (IgM or IgG) Test

A microarray immunoblot in a 96 well format, carrying highly purified Borrelia specific antigens derived from the strain Borrelia burgdorferi sensu stricto.

Each well membrane has an integrated control system with serum controls, conjugate controls, calibrator controls and a negative control. The analyte spots serve to detect Borrelia specific antibodies.
