

ADDITIONAL INFORMATION FOR HOMEOWNER OR CONTRACTOR REGARDING DRIVEWAY REPLACEMENT

1. If your driveway requires a saw cut in the city street, that cut will be full depth and at a minimum of 24" (inches) from backside of curb. The cutout area will require the placement of dowelled pins. #4 re-bar may be used and will be placed 12" from outside edges, following pins will be placed 30" on center throughout the remaining cut. When possible, the City prefers curb grinding; the City still requires the 1" expansion as well as the inspection prior to pouring concrete.
2. The City of Ralston requires a 1" (inch) expansion joint placed directly behind curb and will run entire length of the driveway and will be required to be full depth as well, regardless of street cut or curb grinding.
3. If the homeowner wishes the City of Ralston to seal the 1" expansion, the City requires the expansion to be placed a minimum of ¼" lower than the finished concrete surface.
4. The City also requires an inspection prior to pouring of concrete. Homeowner or contractor should call City Hall at 402.331.6677 to schedule inspections.
