

AMMPS™

Approximating Manual Multi-Pronged Stapler

In Research & Development

- A manual skin and fascia stapler which allows simultaneous approximation of the tissue over the length of the wound
- Conforms to irregular wound shapes
- Space saving – no applicator gun required
- Designed for temporary wound closure of battlefield casualties

ReZorb™

Resorbable Hemostatic Wound Dressing

In Research & Development

A completely resorbable hemostatic wound dressing designed for internal wounds and surgery.

Quickette™

Combat Tourniquet

In Research & Development

An innovative new compact manual tourniquet easily applied with one hand.
