

The Owner of **BULL GUARD** worked together for several years with chemists to create a sealer that gives the home owner peace of mind.

Time, resources, and energy were spent so we could come up with a system that will let sealer penetrate in any stone surface known to man kind. By forcing the sealer to penetrate your stone it will give the protection that allows you to use your kitchen or bathroom freely with no worries. Also, time and time again we hear from people that man-made quartz does not need to be sealed and yet our sealer was formulated that will also penetrate man-made material by giving you the extra protection. We do not say that quartz stains, but having that extra protection is when the peace of mind comes into play.

**BULL GUARD SEALING SYSTEM** is not a simple sealer that you would buy in any home goods store.

It is not just applying sealer, the process takes several steps to seal any countertop between 10 to 100 square feet and more.

It involves preparation like cleaning, to make sure all the pores and veins are clean free of dust and daily residue.

In conclusion I want you as a consumer to know that the process will take 4-5 hours to achieve maximum results.

We will guarantee our sealer for 5 years.

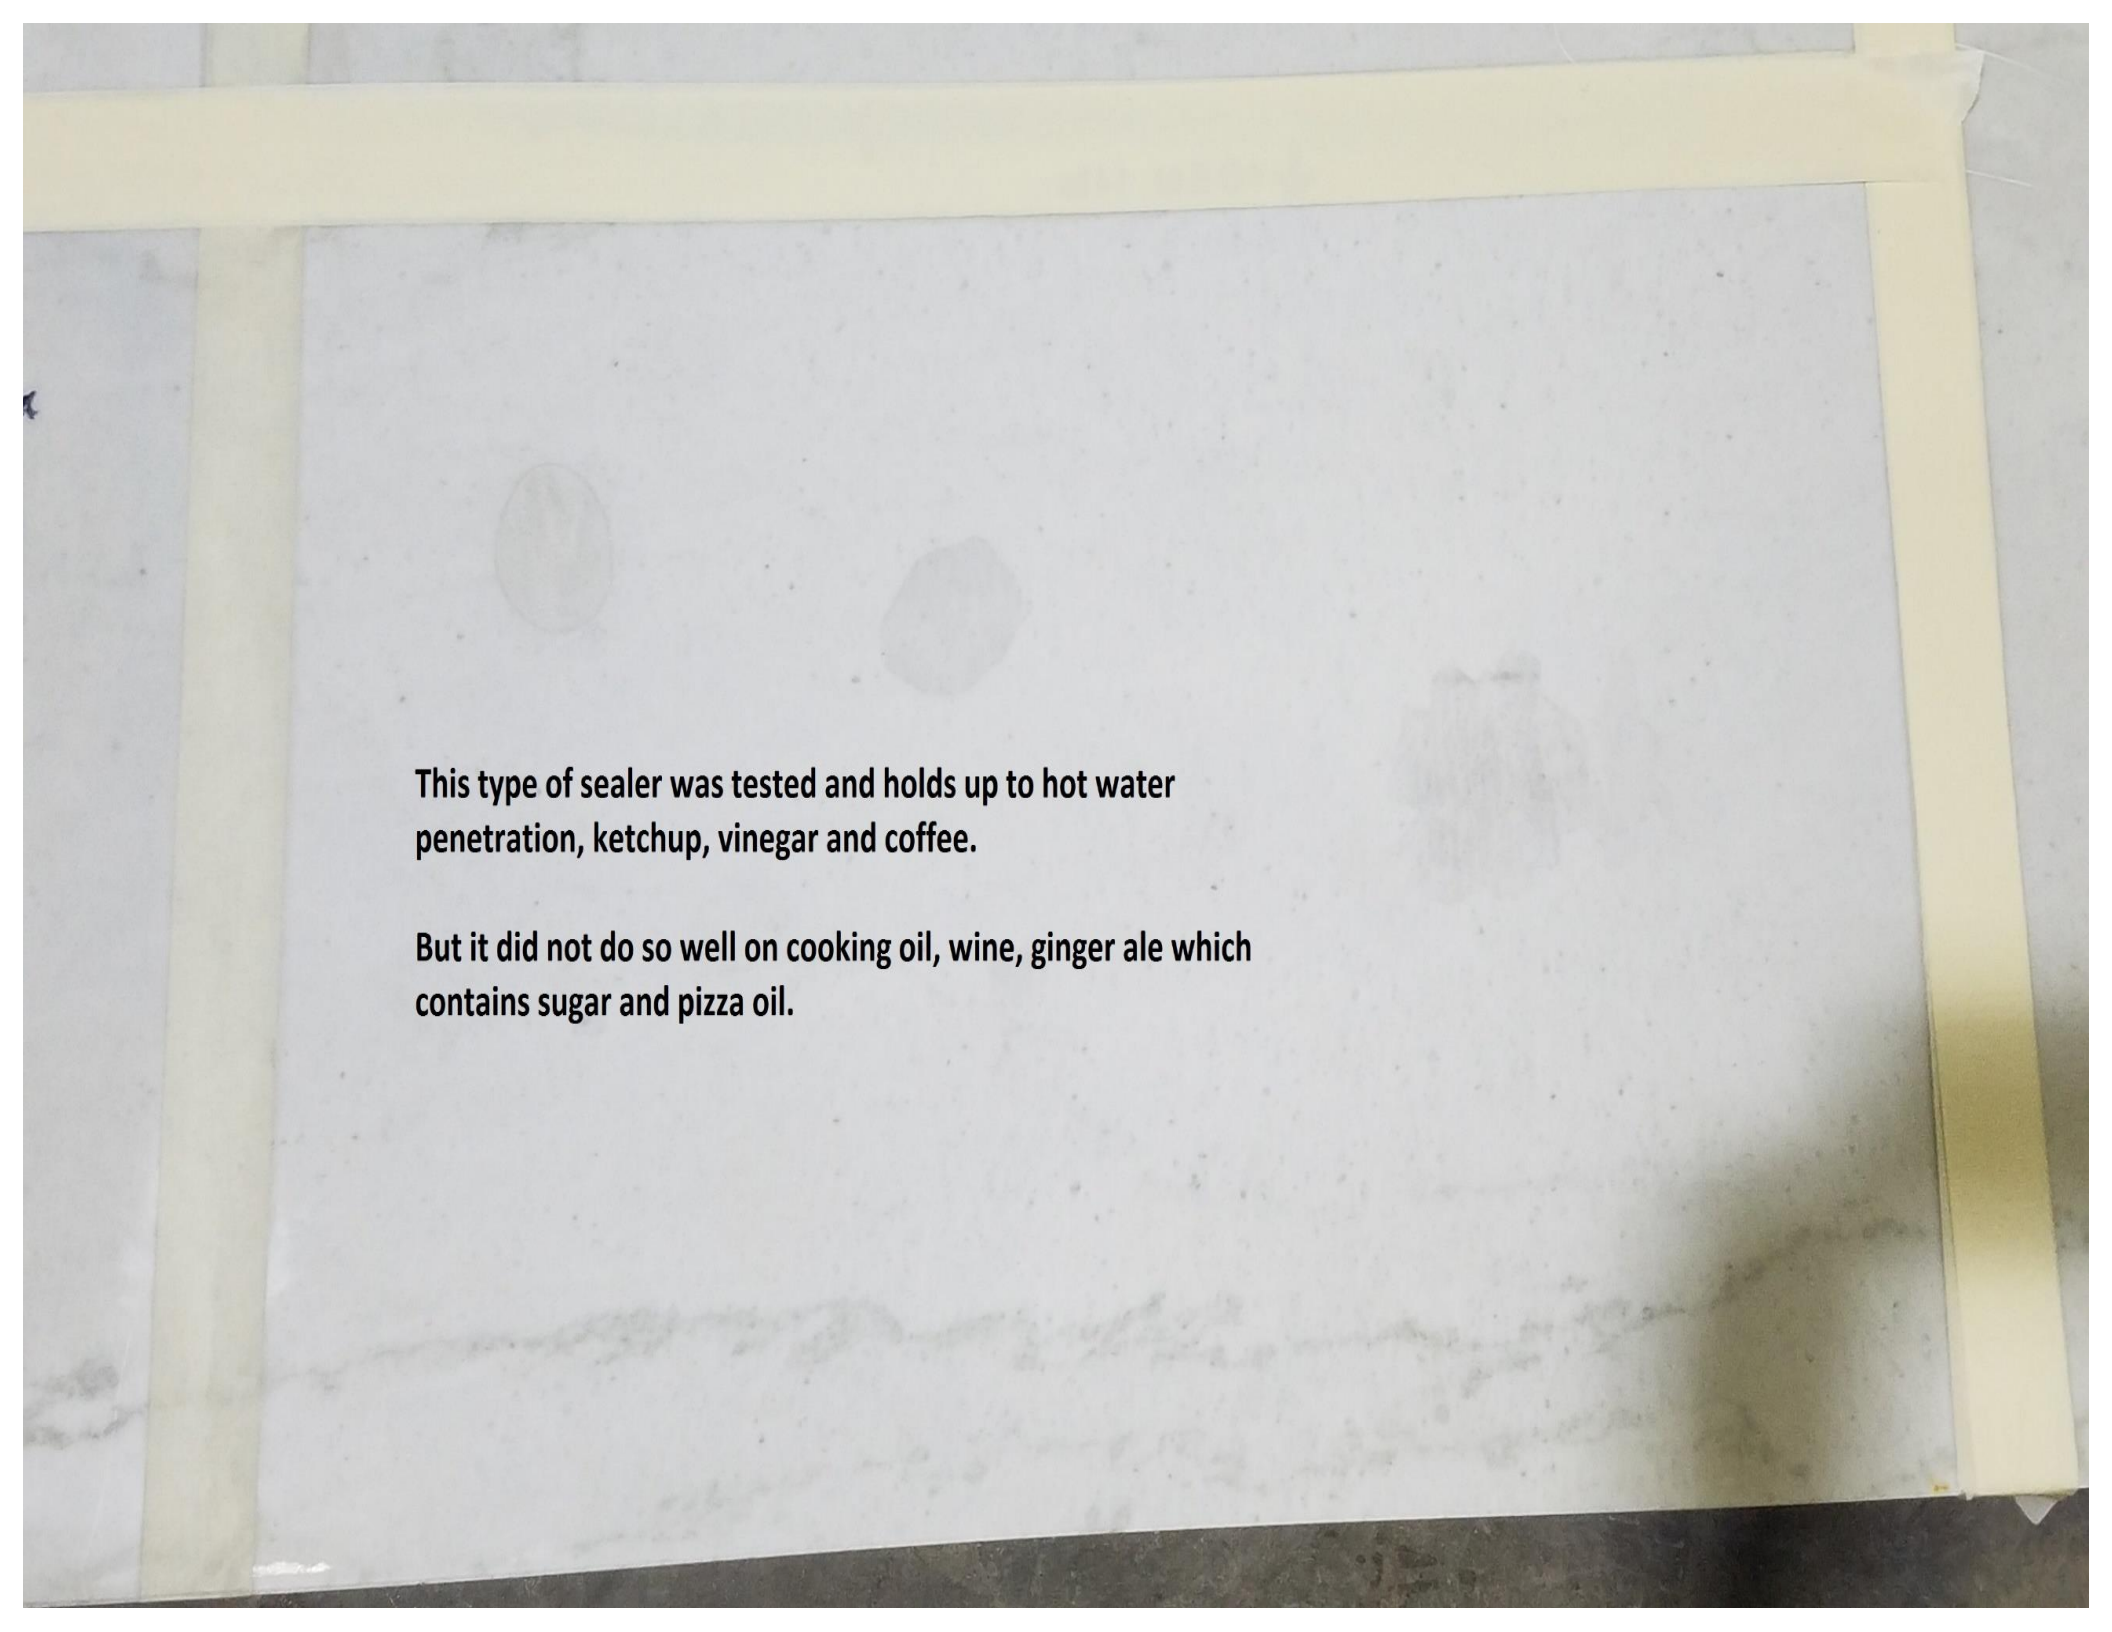

We also offer a yearly maintenance and evaluation of your sealed project.

Testing area :  
We test BULL GUARD  
over 48 hours period of  
time against: cooking oil,  
coffee, wine, vinegar,  
ginger ale, ketchup,  
pizza oil, hot water.  
We had amazing results.

**This type of sealer was tested and holds up to hot water penetration, ketchup, vinegar and coffee.**

**But it did not do so well on cooking oil, wine, ginger ale which contains sugar and pizza oil.**

PERMANENT PAPER

WATER

WATER

WINE

OIL

SOAP

WATER

WATER

PEPPERONI PIZZA

VINEGAR

COFFEE

WINE

OIL

This competitive sealer as you can see in the photos holds up on coffee, hot water, ketchup, ginger ale and wine.

But as you can see it did not hold up well on pizza oil, vinegar and cooking oil.

WATER

KETCHUP

SODA

All testing has been done based on 48 hours of liquid settling on the stone surface.

PEPPER PIZZA

VINEGAR

14000

This testing went bad very quick. After just 45 mins that the liquid settled on the sealer we immediately seen the stain penetrate inside the stone and it did not hold up to anything.

This sealer was purchased mainly from known home improvement store.

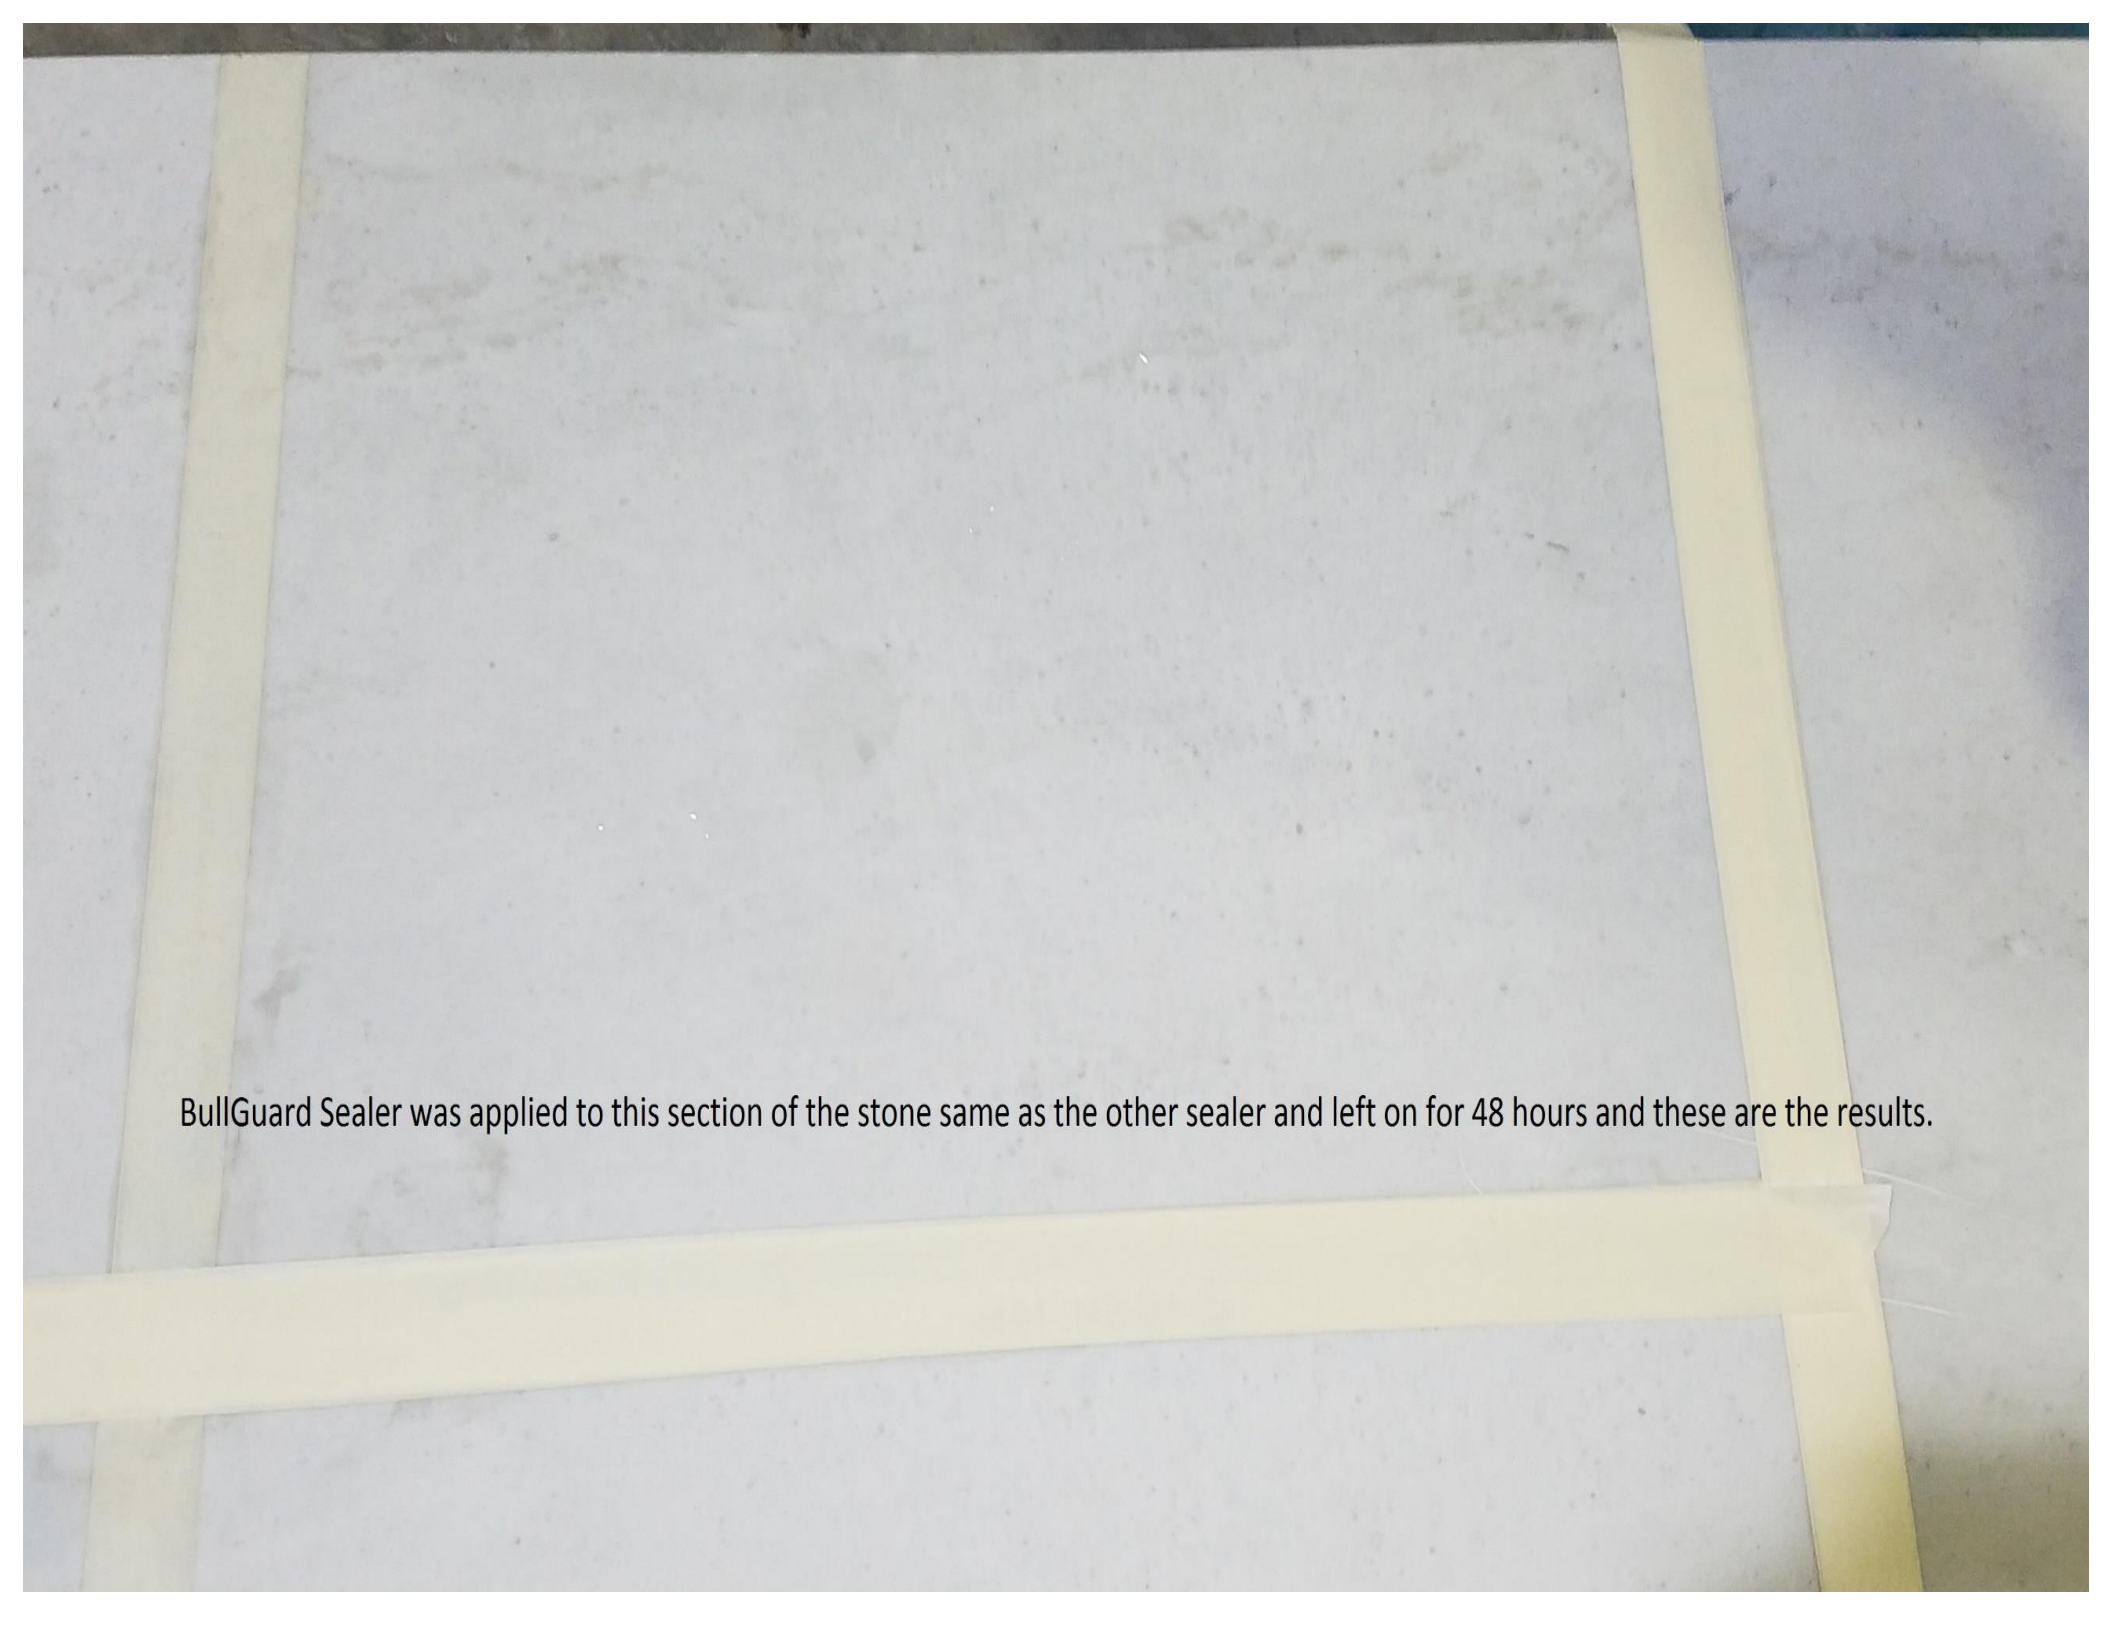

PEPPER PIZZA

VINEGAR

↓ BULL GUARD SEALING SYSTEM.COM

A rectangular piece of light-colored stone, possibly limestone or marble, is shown. The stone has a slightly textured surface with some minor discoloration and small dark spots. Three strips of yellowish, translucent tape are applied to the stone: one vertical strip on the left edge, one vertical strip on the right edge, and one horizontal strip across the bottom edge. The tape appears to be holding the stone in place or protecting its edges.

BullGuard Sealer was applied to this section of the stone same as the other sealer and left on for 48 hours and these are the results.
