A multidisciplinary approach to initiating and continuing breastfeeding may help put new moms at ease.

Our trained and gentle Occupational Therapists provide additional support to lactation consultants and nursing mothers, by addressing the baby’s specific needs.

An occupational therapy evaluation can assess oral motor development and other factors that contribute to breast/bottle feeding.

Strength and coordination of tongue, cheeks, jaw and lips affect:

- Latch initiation and maintenance
- Swallowing
- Complete suck-swallow-breath patterns
- Other strength/motor development factors based on baby’s age that may affect feeding

Children and families are the focus of our multidisciplinary center.

When anxiety, fear, or sadness clouds the joy of your pregnancy/new baby…
We’re here to help

You are not alone…

In addition to the planning, preparation, and lifestyle changes a new baby brings, managing the physical, hormonal and emotional fluctuations of soon-to-be, and new mothers can be overwhelming.

Our counseling team provides the support you need to stay healthy for the benefit of both you and your baby.

Children and families are the focus of our multidisciplinary center.
