

As the pace of business continues to quicken, maintaining reliable connections has never been more important. Shaw Business Multi-Protocol Label Switching (MPLS) network services will help you increase your operating efficiencies and business profitability while reducing your overall operating costs. Our MPLS services put the power to prioritize network traffic into your hands, keeping all your applications moving smoothly and seamlessly between multiple locations.

Our Ethernet Virtual Private Line (EVPL) service offers a cost effective, scalable alternative to Private Line and ATM services. Virtual Private LAN Service (VPLS) provides a sophisticated Ethernet-based data service which emulates LAN switch and bridge functions, meshing all customer LANs into a single-bridged, Ethernet LAN. With VPLS, all customer sites appear to be on the same LAN - regardless of location. And of course, our services are backed by our exceptional high-performance network and our 24/7/365 technical support dedicated to business customers.

#### Features Include:

- Access to consolidate all your different types of traffic, be it voice, video, Internet or other data onto one single managed connection
- Layer 2 connectivity allows you to connect directly into your end customer's LAN environment without any additional equipment to manage or support
- Full customer control of access equipment and configuration
- Native Ethernet Interfaces (Ports) - FastE, GigE, 10 GigE with Scalable bandwidth 1 Mbps - 1,000 Mbps
- DSCP and CoS transparency - customer DSCP or CoS markings preserved and kept intact
- QinQ tunneling - tunneling of 802.1q trunked VLANs
- Flexible Topology Options: Point-to-Point, Point-to-Multipoint, and Multipoint-to-Multipoint
- Aggregate multiple end customer EVPL's through an ENNI
- Four Classes of Services (Best Effort, Standard, Priority, and Real-Time)
- Bundled pricing and Service Level Agreements that deliver value and performance
- MEF Carrier Ethernet 1.0 Certified on fiber-based services
