

# CYDONIA MARTIAN STAR MAP I

The purpose of this illustration is to approximate the scale of how large the Cydonia Pyramid complex is in comparison to the core of the District of Columbia and its surroundings. In comparison, the Martian structures were massive in size taking up the entire width and breath of the Mall from the base of the Washington Monument to the Capital Hill for example as it pertains to the size of he Face of Mars 'Temple' or mausoleum.

The scale of the Pleiadian Pyramid City approximates the relative size of a modern metropolitan city core. The only difference is that the various structures were massive in size.

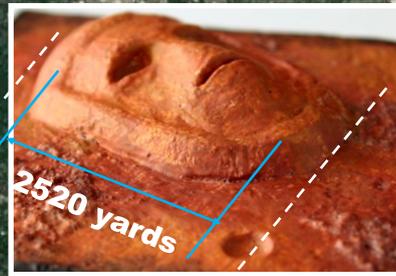

## Washington DC to Scale CYDONIA MARS TRIANGULATION PATTERN

The Beltway matches Circumference.

The size of the Face of Mars would envelope the entire Washington DC Mall area.

'Face of Ala-lu'

233° heading  
25,200 ft perimeter

Pentagon Fortress

The size of the Pentagon Fortress would look like a massive mountain

The size of the Face of Mars appears to be in phi ratio to the Capital Hill an the Washington Monument and the White

Due to the topography, Washington DC is one of the few places on Earth where the Martian Motif of the pyramid complex nearly approximates the positioning of the 3 structures on Mars.
