

# NY State Clean Energy Funding

- 1** Your wages, paid as taxes...
- 2** fund NY State agencies (that award long term "partner" contracts to industrial wind and green energy companies for producing electricity, paying as much as 2.4¢ per kilowatt) Without these funds industrial wind is not profitable and project will not be built.\*
- 3** NY State agency pays for green electricity and calls those megawatts RPS "attributes". They are then converted to REC "certificates" that your utility company is mandated (forced) to buy and pass the cost on to you.\*\*
- 4** You are then mandated (forced) to pay "premiums" for the green energy contracts with a line item (SBC) charge on your electric bill.\*\*  
(money goes back to the NY State agency to fund wind company projects. Essentially you are paying the land owners' leases, PILOT, etc., as well as all the administration costs associated with this funding and, Industrial Wind is encouraged to take credit for stimulating the NY State economy.)
