

National Fuel Northern Access Project

Project Availability

Read about the project and how our residents have been commenting at the Federal Energy Regulatory Commission website:

http://elibrary.ferc.gov/idmws/docket_search.asp

Search Docket Number: CP15-115

The project is also available in book form at the North Tonawanda Public Library 505 Meadow Drive, North Tonawanda, NY 14120

Comments are still being accepted by FERC.

Please post a comment/question using the eComment link at the FERC website. Use factual information to support your statements. Reference the inaccuracies of Resource Reports 1-13 from National Fuel in the FERC elibrary.

Events happening in Pendleton:

- A **22,000 horsepower gas compressor station** will be built in our area **less than a mile from the school** releasing many harmful chemicals into the air and soil and is a major hazard to human, animal and plant health. *Health risks from these chemicals include eye and respiratory tract irritation, headaches, dizziness, visual disorders, fatigue, loss of coordination, allergic skin reaction, nausea, and memory impairment, and damage to the liver, kidney, and central nervous system, as well as, **elevated risk of cancer**.* *Resource: <http://goo.gl/RdqeLu> (links are case sensitive)*
- Compressor stations have a tremendous amount of constant noise starting with the construction phase and lifelong, *continuous ground vibrations and low-frequency engine noise* averaging 55 decibels or higher. *Resource: <http://goo.gl/jLCyME> (links are case sensitive)*
- National Fuel will be upgrading the gas pipeline from 16" to a 24" high-pressured pipeline for 4-miles in our town with random day/night "blowdowns" sounding like jet-engines that could last for hours. Part of the pipeline upgrade is *along the capped Frontier Chemical Superfund* containing *semi-volatile and hazardous waste chemicals* at Townline and Beach Ridge. Read an article on pipelines and health <http://goo.gl/81jng7> (links are case sensitive)
- Decreased wildlife and disrupted habitats is a concern due to the noise levels and the environmental pollution from the compressor stations and pipeline. *Resource: <http://goo.gl/DUjhF2> (links are case sensitive)*
