FOR CORPORATE

FORD MOTOR CREDIT CONSOLIDATES COLLECTIONS OPERATIONS, UTILIZES ROTARY FILES FOR STORING LEGAL DOCUMENTS

- WHAT:** Ford Motor Credit Company.
- PROBLEM:** Ford Motor Company opened eight regional service centers and needed to save space while consolidating records from 150 sites.
- OBJECTIVE:** To utilize space in a cost-effective manner by building eight locations rather than 150 separate locations.
- SOLUTION:** Incorporation of 36 rotary systems into a pilot service center. After proven to be effective, this system is now the standard in service centers across the country.
- PRODUCT:** Spacesaver Rotary storage systems.

UNIQUE FEATURES

- Ford imaged its nonlegal records and incorporated more than 200 Spacesaver Rotary storage systems into regional file rooms to store legal title documents.
- A new business model was designed that focused on consolidating the back room collections and administrative functions from each branch location into eight regional sites.
- Some storage rooms were being located on the second floor. Floor loading was a concern, and the Rotary storage systems provided less weight per square foot.

BENEFITS

- Ford Credit was able to build new regional sites with less square footage and save on construction costs.
- Accommodate the company's desire for storage flexibility by providing trouble-free relocation and easy expansion using add-on storage units.

"We wanted a product from a company that had a good reputation and mechanical reliability, so we selected Spacesaver."
