

### **Visual Field Testing**

The Visual Field test allows us to perform a more thorough medical exam of your visual system.

It measures the retina's sensitivity to light in specific conditions. Abnormal Results on this test can help your doctor determine if you are at risk for the following conditions: Glaucoma, Brain Tumors, Multiple Sclerosis, Diabetic Retinopathy, Hypertensive Retinopathy, Retinal Detachments and other medical conditions.

**The doctor strongly recommends** that **all patients** receive the Visual Field as a baseline test during their first appointment, and repeat annually. It is especially important for people who have:

- Headaches
- Flashes / Floaters
- Diabetes
- High Blood Pressure
- Heart or Circulatory Problems
- High Cholesterol
- Family history of Diabetes, High Blood Pressure, High Cholesterol, Heart or Circulatory Problems
- Patients taking Plaquenil or Prednisone
- Strong Eyeglass Prescription
- Losing vision with no explanation
- Anyone over age 30

With an annual Visual Field screening, our doctors can track your eye health for concerns, comparison, and treatments. Unfortunately insurance does not pay for routine Visual Field screening test, there is a **\$25.00** fee for this procedure.

\_\_\_\_\_ YES, I elect to have the Visual Field screening.

\_\_\_\_\_ NO, I DECLINE the Visual Field screening. I understand that the potential for partial or total vision loss may exist due to undetected eye disease. I therefore release Sun Valley Eye Care from any liability resulting from failure to diagnose or treat any eye condition due to the lack of diagnostic information, which could have been obtained by performing this test.

Patient / Parent or guardian if patient is a minor

### **Hi-Res Retinal Photograph**

Sun Valley Eye Care is pleased to offer you and your family the most highly advanced technology available in eye disease detection, the Hi-Res Retinal Photograph.

Our doctors are concerned about retinal diseases such as macular degeneration, glaucoma, retinal detachments, and diabetic retinopathy; all which can lead to partial loss of vision or blindness. Additionally, systemic diseases such as diabetes and high blood pressure can be detected with a retinal examination. Eye exams with retinal evaluations can help you safeguard both your eyesight and general health.

The Hi-Res Retinal Photograph allows us to thoroughly evaluate your internal eye health with dramatically improved precision that includes a depth in the retinal not seen with regular dilation.

**The doctor strongly recommends** that **all patients** receive the Retinal Photos as a baseline test during their first appointment, and repeat annually. It is especially important for people who have:

- Headaches
- Diabetes
- High Blood Pressure
- High Cholesterol
- Family History of Glaucoma, Macular Degeneration, and/or Blindness
- Family History of Diabetes and/or High Blood Pressure

With an annual Hi-Res Retinal Photograph, our doctors can track your eye health for concerns, comparison, and treatments. If elected, there is a **\$39.00 copay** for this procedure. (Please advise staff if you have a history of epilepsy.)

\_\_\_\_\_ **YES**, I elect to have a Hi-Res Retinal Photograph of my retina.

\_\_\_\_\_ **NO, I DECLINE** the Hi-Res Retinal Photograph and am choosing to be dilated today. I understand that my vision will be slightly blurry after dilation and light sensitive for 4-6 hours.

\_\_\_\_\_ **NO, I DECLINE BOTH** the Hi-Res Retinal Photograph and dilation. I understand that the potential for partial or total vision loss may exist due to undetected eye disease. I therefore release Sun Valley Eye Care from any liability resulting from failure to diagnose or treat any eye condition due to the lack of diagnostic information, which could have been obtained by performing this test.
