

CLUTCH RUNNING-IN

After installing a new clutch disk flywheel assembly, the clutch must be run-in as follows:

Step one:

1. Do not activate the AUTOMATIC, SPORT or LOW GRIP functions.
2. Start 5 times in first gear (Stop and Go).

Note

After starting each time in first gear, travel a minimum of 100 m before carrying out the operation again.

Step two:

3. Start in first gear and let second gear engage at approximately 3,000 rpm.
4. Slow to approximately 20 km/h. First gear engages automatically. Repeat the procedure 5 times.

Step three:

5. Accelerate in first gear to 6,000-6,500 rpm and then release the accelerator until 2,000-2,500 rpm.

Important!

Avoid "jump starts" and uphill starts during the first 100 km.

Note

After running in, use the La-Ra-AS system to check clutch wear (read clutch, snap shot save). A printout of the data must be presented to Lamborghini Technical Assistance upon request.
