PETALUMA, California July 25, 2018 — Vir2us, Inc., the global leader in endpoint security, announced an extension of its distribution relationship into Canada with Advanced Network Devices Inc., a Canadian technology value-added distributor of valuable and pioneering solutions for our business partners. As part of a cooperative global network, Advanced Network Devices introduces the latest technologies and best practices to the Canadian market faster than any other distributor.

Under the terms of the new agreement, Advanced Network Devices will market, sell, and support Vir2us's full product portfolio including its flagship cyber security software VMunity, which offers cyber threat immunity and cloud-based, centrally managed security of digital assets. The VMunity Enterprise Platform is an automated, lower-cost platform that can dramatically reduce the heavy overhead imposed by current cybersecurity defences.

The Vir2us VMunity Enterprise Platform provides the technology required to protect network endpoints through nano-isolation and a multidimensional COS matrix. This Platform delivers a secure computing ecosystem by employing features including the following:

- Secure sealed Ring 0 Hypervisor inaccessible to attackers
- Virtual isolated computing environments
- A secure minimum trusted computing base
- Leverages the Trusted Platform Module (TPM chip) below the sealed VMunity Hypervisor

Additionally, Advanced Network Devices will sell Vir2us's other innovative products which include:

- ✓ Genesis - The Genesis component of the Vir2us VMunity Platform quickly restores computing environments to a day-one, pristine state to provide complete assurance of uncompromised and secure computing. Genesis can be deployed from the cloud, or from the Genesis iPac3 handheld device.
- ✓ iKit - iKit enables the automated custom configuration of the VMunity Service Matrix and allows developers, designers and system managers to build cybersecurity directly into bespoke applications software.

Patented Vir2us technologies end the game with hackers and insiders by delivering cloud-based, centrally managed security of global digital assets. By employing built-in secure processes and disposable computing environments malicious software simply cannot propagate or persist.

Vir2us affords genuine security of digital assets now, with managed solutions delivered from the cloud, configured in minutes and deployed globally.   With powerful cloud-based controls that preempt both known and unknown cyber threats, and a real-time mobile dashboard, there is simply nothing better.

"As a leading technology solutions distributor, we are happy to add Vir2us to our portfolio. Not only do they offer innovative and patented solutions, but their market focus is aligned with Advanced Network Devices, making them a perfect fit." said Yasmin Sharifi, Vice President of Marketing at Advanced Network Devices.

"We look forward to working closely with Advanced Network Devices to offer Resellers, and their customers, in the Canadian market the most innovative solutions for cyber security" said Ed Brinskele, CEO at Vir2us.

About Vir2us

Vir2us is a California based team of visionary thought leaders and technology solutions architects that have invented and patented some of the most widely adopted secure computing technologies in use today. There is hardly a company in the computer manufacturing and secure computing industry that does not employ Vir2us technologies.

 Spawned in the Silicon Valley and San Francisco Bay area in 2001, Vir2us team members were pioneers of digital networks, e-commerce, self-repairing systems and virtual isolated computing, to name just a few. The company's technologies have received wide acclaim from government, industry and academia.

Today Vir2us boasts the only comprehensive and fully integrated suite of cybersecurity solutions for creating zero-vulnerability computing environments for nation states, critical infrastructure and global companies seeking to manage and protect digital assets. Vir2us solutions provide powerful, real-time information and response measures that are unparalleled.

About Advanced Network Devices Inc.

Advanced Network Devices Inc. is headquartered in the Toronto, Ontario, Canada and operates in all Canadian provinces, spanning western, northern, central, and eastern regions. Advanced Network Devices Inc. boasts an expansive Canadian network. In Canada, Advanced Network Devices provides cutting-edge technologies and services for our partners by utilizing both the domestic relationships we have with leading companies. We support our partners in various fields to differentiate themselves from their competitors, as well as to lead their markets.
Advanced Network Devices,
Better science through better solutions....
