## **Noise**

TAN 11 Noise (October 1997)<sup>1</sup> sets out guidance for dealing with noise generating developments.

*“8. Local planning authorities must ensure that noise generating development does not cause an unacceptable degree of disturbance. They should also bear in mind that if subsequent intensification or change of use results in greater intrusion, consideration should be given to the use of appropriate conditions.”*

The application site is within an industrial estate with residential dwellings over 500m north. It is considered that noise will emanate from the site during the construction and operational phases.

## **Construction Phase**

Given the distance to residential dwellings it is unlikely that residents will experience any noise disturbance. Whilst there may be some noise experience by the less sensitives adjacent offices and industrial premises, this noise will be limited to the duration of the construction process. Any noise emanating from the construction phase can be

<sup>1</sup> <https://gov.wales/sites/default/files/publications/2018-09/tan11-noise.pdf>

controlled by planning condition and appropriate measures set out within a Construction Management Plan.

### Operational Phase

The proposed development is for a storage and distribution facility. The development does not require internal or external plant and there will be no air conditioning. As such any noise resulting from the development will be limited to the movement of vehicles.

Given the type, scale and location of the development it is submitted that a Noise assessment is not required.

Yours faithfully,

Robert Bowen.
