

“Valley Children's Hospital has treated all three of our kids, but most importantly, our son, Domenic - who was 15 years old at the time, contracted a virus of his heart. This started out as pain in his chest and back to an Emergency Room visit and then to Pediatric Intensive Care Unit. We were told worst case scenario, he would need a heart transplant. He went from being a completely healthy teenager to almost needing a heart transplant. That was the most terrifying moment of our lives. Thank God, Domenic's virus reacted well to the medication and he was able to come home after a little over a week in the PICU. During Domenic's stay, the patients on either sides of his room didn't make it. That is something I carry with me every day and I pray for those families and thank God for our blessings.” - Tammy
