### **STORMTROOPER – FIRE ANT KILLER AND CONTROLER**

#### **DESCRIPTION**

This is a unique, new product designed for outdoor use in yards, parks, woodlands, playgrounds and golf courses for the kill and control of fire ants. The mound penetrating rod kills fire ants in their mound.

The superior effectiveness of this product is that it immediately kills the queen ant and her eggs, thus halting the reproductive cycle and stopping further infestation.

This product does not have to physically contact the ant to be effective and has long-lasting killing powers, up to 3 weeks.

Ants are killed by the vapor emitted by this product. These vapors are heavier than air and migrate downward, penetrating every tunnel and compartment so no ant can escape its deadly fumes. A properly treated fire ant mound at normal temperatures (68 - 90 F) will result in total kill in from one to eight hours.

#### **FEATURES**

- **EPA REGISTERED**
- **QUICK AND EFFECTIVE KILL**
- **TOTAL KILL IN 1 TO 8 HOURS**
- **HALTS REPRODUCTIVE CYCLE**

#### **USE AND DIRECTIONS**

See Product Label

**NOTE:** The kill rate of FIRE ANT KILLER varies with the temperature. At temperatures below 50 F it may take from 1 to 3 weeks to kill all ants in the mound. Kill rate is also affected by excess moisture. Treatment should not be made when the mound is saturated with water. At normal temperatures(68 – 90 F) a total kill will result in 1 to 8 hours
