

BaggerSkins Installation Update – Rushmore Batwing Fairings – (with Vent)

April, 2018

We have an update for the installation of the Batwing Rushmore Fairings –

Harley Davidson has added a Vent in the center of the Fairing – This vent could interfere with the graphics and it's important to communicate that you have this vent when ordering your BaggerSkins Fairing Kit.

We will adjust the graphics so that the trimming for the vent does not interfere with key elements of the graphics.

Installation is basically the same as demonstrated in our videos and printed instructions with the exception of the trimming necessary around the vent –

Trimming –

Trimming should be done after the Skins have been applied and as a final step.

Be careful not to trim on the Fairing, but only in the crease or edge of the vent. Use a sharp blade to insure a smooth cut and only use enough pressure to cut the vinyl.

Vent area to be trimmed
