

Generator Systems

Smarter Backup Power

Reliable GE generator systems consistently provide permanent backup power for your home during a power outage. Each home generator is equipped with patented power management technology and an unmatched warranty.

With GE Symphony® II technology, you can power more of your household appliances with a smaller generator.

Power more for less.

When a power outage occurs, it's unlikely you'll want to turn on every appliance in your house all at the same time. But you also don't want to be left guessing at what appliances you can turn on while your backup generator is running. That's why the patented Symphony® II Power Management System is designed to actively monitor and manage the power usage of our whole house - all with a smaller, more affordable generator.

Don't buy a larger generator. Buy a smarter one - GE.

- Lets you prioritize the use of up to eight high-wattage appliances
- Actively monitors and manages power usage
- The smart way to direct backup power anywhere in your house, without the need for a large, expensive generator
- The best comprehensive Parts and Labor warranty** in the industry
