Genesee Northern Research Establishes GB Bearings Division and Launches Website Dedicated to the Geometrically Contoured Bearing Innovation: www.gcbearings.com

West Henrietta, NY, USA – April 29, 2014. In response to growing interest in their Geometrically Contoured Bearing innovation, Genesee Northern Research LLC (www.geneseenorthern.com) has established a GC Bearing Division. To further support this activity, a new website dedicated to the technology has been launched: www.gcbearings.com

The GC Bearing concept utilizes proprietary structural designs and materials of construction to produce a sliding bearing which has demonstrated superiority to roller bearing components in a variety of applications. The self-lubricating, self-cleaning bearing has been proven in automotive universal joint applications and U.S. Army field testing in high contamination environments.

The GC Bearing Division of GNR is currently seeking industrial partners for further development of the technology and potential licensing arrangements.
