Six Weeks • 18 September – 29 October 2017 • Weeks 38 - 43

DISTRICT 5 RESIDENTIAL BURGLARIES

Talking Points:

- While the chart overlapped data over a three week period, so that data is different than what we have, no matter how you compare it, there has been an increase in residential burglaries in District 5 over the time period used on the chart provided.
  - While the percentage increases are high, the actual number of increases is quite low.
    - *i.e., a 50% increase in Week 41 of 2017 compared to 2017 only amounted to 2 burglaries.*

- We have analyzed these burglaries and burglaries citywide and they currently don't have any patterns, trends, or commonalities.
  - This is mostly due to lack of suspect information/descriptions and lack of witnesses.

- The one consistency in the last six weeks is that approximately 52% occurred during daylight hours.

- Overall, even though burglaries are slightly up, Part I Offenses as a whole in District 5:
  - Have decreased 20% over the last 7 days compared to the same week in 2016.
  - Have decreased 5% over the last 28 days compared to 2016.
  - Have decreased 12% year-to-date.
  - Have decreased 9% for the three year, year-to-date average.

- We look at these numbers weekly to look for trends and issues to which we can deploy our resources.

- As we just experienced with the capture of the recent University of Utah shooting suspect, one person who is observant can make a huge difference. If you see your neighbor's garage door open, let them know. Lock your doors. Be a good neighbor. See something – say something. Leave outside lights on. Make your home look occupied. These will all help deter crime.

Any figures contained herein represent preliminary counts of original police incidents or calls for service. Due to the statute-driven, changing nature of crime classification and area boundaries over time, the figures contained may not fully coincide with data shown in other areas of SLCPD's crime statistics page. Differences are reflective of the departmental procedures or policies that were in place at the time the events occurred and the date the data was compiled. Data may also be approximate in relation to indicated areas. Results are generally classified by primary offense categories as defined by the Uniform Crime Reporting (UCR) system. However, data is not subjected to any other standards set forth under UCR and may not be distinguished as "attempted" or "completed". Full statistical analysis to determine the confidence level of this data has not been performed. Although every reasonable verification effort is made, the accuracy of any data is subject to the constraints of the report generation process as well as the manner, format, and point in time of any query. The SLCPD accepts no liability for decisions made—or not made—based on information contained herein.

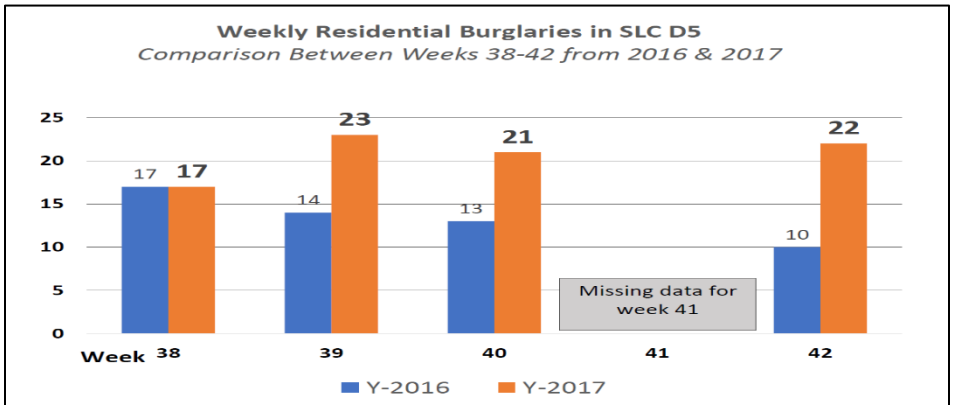
DISTRICT 5 RESIDENTIAL BURGLARIES

Addressing the Chart produced by District 5:



Source: Salt Lake City CompStat Reports

This chart is using numbers from SLCPD's CompStat Report for Weeks 38 through 42.

However, it is using figures from the 'Last 28 Days' column, which overlaps numbers/counts.

For Example:

The last 28 days on Week 38 in 2017 is for the time period of August 28th through September 24th.

The next columns, for Week 39, are for the 28 day time period which includes September 4th through October 1st.

Therefore, Weeks 38 and 39 cannot be compared to one another because the dates of September 4th through September 24th are included in both sets of data.

DISTRICT 5 RESIDENTIAL BURGLARIES

Miscellaneous Details:

44 = Total Residential Burglaries listed on CompStat Reports from Week 38 through Week 43.

03 = Detached garages/sheds that were coded improperly (should be NonResidential Burglaries).

01 = Package theft from an enclosed/unlocked porch.

01 = Report was unfounded, victim/owner simply misplaced their property.

05 = Houses were 'trashed' in a manner above 'normal' burglary rummaging
i.e. garbage strewn about intentionally, items broken but not stolen, etc.

23 = Occurred during daylight hours.

- Not enough suspect information to establish commonalities.
- Entry methods too common and without distinguishing factors to establish trend or pattern.

Any figures contained herein represent preliminary counts of original police incidents or calls for service.
