# Presentation of Art & Science

Friday, April 7, 2023 | 7:30 – 10:00 pm | CSM Theatre (Bldg. 3)

**Join Mohsen for #34 in this Series of Annual Presentations!**

We have two worlds: In our outer world, we exist, interact with others, and deal with the everyday commerce of life. At the same time, we live, dream, imagine, and think in our inner universe. Our mental imagery connects these worlds, and how we connect them determines the nature of our reality. Moreover, that connection is governed by the way we see the world. Seeing with both artistic and scientific eyes is a fundamental and fulfilling exercise in visualization and is the topic of the 34<sup>th</sup> Presentation of Art & Science. I will demonstrate this by exhibiting some of my artwork and material from my book, "Conjunctive Theory: Mental Imagery in the Arts and Sciences" (in production by Cognella Publishing Company and available in June 2023). After the presentation, please join us for refreshments in the Theatre lobby. We will complete the evening by setting up telescopes outside in front of the Theatre, courtesy of the San Mateo County Astronomical Society and CSM's Astronomy dept. With help from the experts, you will be treated to a spectacular view of celestial beauties.

~Mohsen
