Re: Potential fire and life safety impacts to communities in Santa Clara County related to the proposed Phillips 66 Company Rail Spur Extension Project

Dear Chair Arnold, Chair Topping and Director Bergman,

I am writing this letter on behalf of the ten fire, rescue and emergency medical services chiefs that represent nearly 1.9 million community members in the cities and unincorporated areas of Santa Clara County. I would encourage the County of San Luis Obispo to consider the impacts along the rail corridors that lead into the proposed Phillips 66 Company Rail Spur Project.

The role of the Santa Clara County Fire Chiefs Association is to support community risk reduction, fire, rescue and emergency medical service needs through the development of customer-focused and sustainable initiatives. We are extremely concerned with the potential presence of high hazard flammable trains moving through our communities.

Normally fire and emergency services would be able to assess hazards through right-to-know and other public documents; however, the rail industry has sought and gained exemptions to these sunshine laws. This exemption does not mean that Phillips and the rail industry are exempt from taking reasonable steps to ensure catastrophic incidents do not occur. Railroads have balked at requests by emergency responders that would make public such information as the schedule of oil trains passing through population centers.

Oil train safety has assumed a much higher profile after recent accidents in Lac-Megantic, Quebec, that killed 47 people and burned homes inside out as fire erupted out of water pipes, drains and sewers. What is Union Pacific and Phillips' calculated Worst Case Scenarios for a potential crude oil emergency in urban and

sensitive environmental locales? The Santa Clara County Fire Chiefs have yet to receive any data from Phillips or Union Pacific that identify the potential impact of a crude oil disaster in Santa Clara County.

Given the potential for accidents, spills and fires along the right of way that would impact hundreds of thousands of our County's residents, visitors and workers, we strongly believe these corporations should provide our fire agencies, firefighters and hazardous materials specialists with robust training and equipment upgrades as part of a mitigation plan. The cost to provide personnel, training and equipment should not be borne by the taxpayers of Santa Clara County.

We are prepared to work with all public, private, federal, state and local agencies to prepare and mitigate these hazards. Until this happens to our expectation, the Santa Clara County Fire Chiefs Association is adamantly opposed to Phillips' plan to transport these hazards through our communities.

This is not just Santa Clara County's issue, but an issue for all of the communities along the transportation corridor. We look forward to collaborating on safer alternative solutions.

Regards,

Eric Nickel
