1. Use the number line to complete the multiplication equation.

$$
\begin{array}{ll|l|l|l|l|l|l|lll}
\frac{1}{2} \text { of } \frac{1}{7} & \longleftarrow & & & & & & & & & \\
& \begin{array}{llllllll} 
& \frac{1}{7} & \frac{2}{7} & \frac{3}{7} & \frac{4}{7} & \frac{5}{7} & \frac{6}{7} & \frac{7}{7}
\end{array}
\end{array} \longleftrightarrow \frac{1}{2} \times \frac{1}{7}=
$$

2. Complete the area model to find the product. The area model represents 1 .

3. Draw a model to find the product.

$$
\frac{1}{6} \times \frac{2}{3}=
$$

$\qquad$

## REMEMBER

4. Partition, shade, and label the tape diagram to represent $\frac{2}{4}$. Then use the tape diagram and multiplication to partition and label the number line to represent the equivalent fraction.
$\frac{2}{4}=\frac{3 \times 2}{3 \times 4}=\frac{6}{12}$

5. Complete the equation to show an equivalent fraction. You may draw an area model to help you.

$$
\frac{8}{10}=\frac{4}{}
$$
