Stainless steel construction.

15# Hopper with extensions available.

Variable airflow control.

Dust collection system.

Easy clean design.

Many mounting options.

Even very small stones will be captured.

CoffeeLoaders.com

The standard hopper holds 15 pounds of roasted beans. You can add a ten inch extension to hold up to forty pounds of beans. You do not need to hold the entire roast. The hopper will start unloading as soon as you start filling the beans.

Adjustable airflow controls speed and separation. In normal operation to separate stones you can run fast up to 1200 pounds per hour. If you want to separate out green beans and quakers from a medium or lite roast you can reduce the airflow.

The DeStoner can be mounted on a table, wire rack or on a board over the container you want to fill. The wire rack is a good low cost solution. The beans flow through the openings in the wire.
