

## Our Collection January 2020

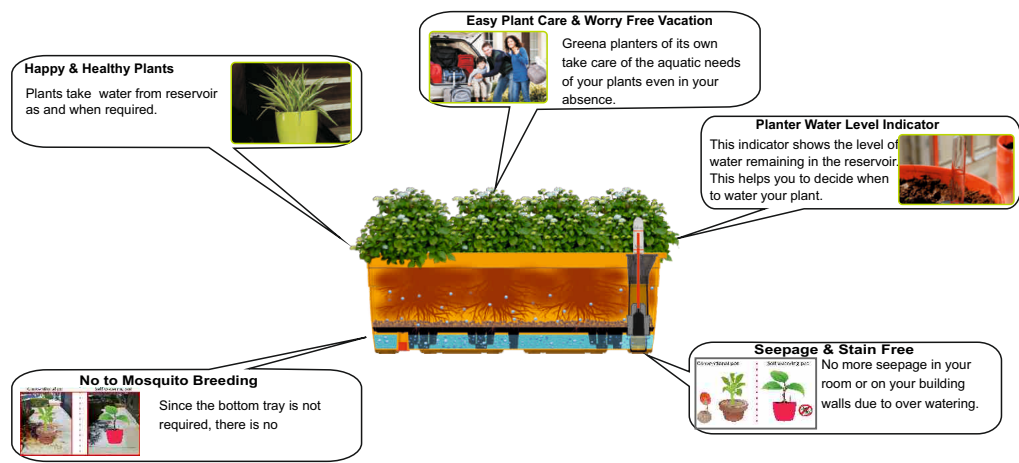

Smart Tray & Wick (Self Watering Tray)

The Water Collected in the tray is absorbed by the plant through wick by capillary action

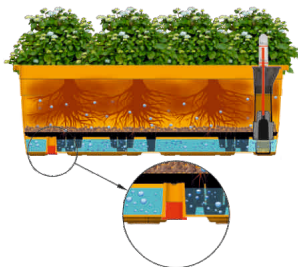

Self Watering Planters

Greena Self Watering Planter is designed to give a convenient plant care. It has a reservoir which holds water. The divider disk allows water to be in continous contact with the soil/medium through its slits. Soil absorbs water via capillary action and the plant gets water as and when required.

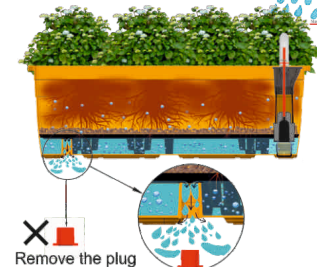

Plug Feature

For Indoor - Insert the plug for no-seepage.

For Outdoor

Remove the plug to drain out the excess water or rain water.

Direction of Use:

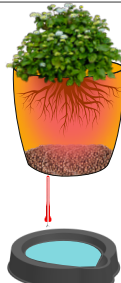

Make Minimum 2 Holes of  
Ø 8.0 mm

Place ECA  
at Bottom

Place the Plant

Insert the wick

During First 4 weeks  
Pour water from top.  
Excess water drains  
down to the tray through  
the other hole

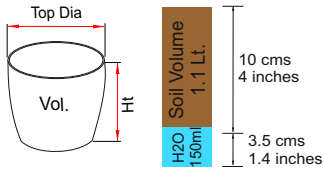

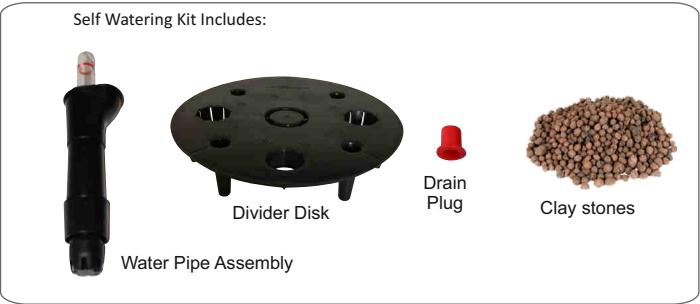

After 4 weeks,  
once the plant starts growing  
Pour water through mouth.  
wick takes the water from  
Tray by capillary action
