To amend Federal Law as it deals with the federal farm subsidies.

### The Federal Farm Bill of 2025

## **Section 1**

Beginning January 1, 2026, all farm price supports, subsidies and all other payment and credit mechanisms (except crop insurance and payment for crops actually delivered to the federal government) from the federal government to farmers and ranchers, whether practiced as an individual, corporation or as any other type of organization are reduced from 2025 levels, by 25% a year in each year of the next four years so they reach 0% in 2030. The federal government may make one-time payments from time-to-time to these members of these groups as a direct result of trade conflicts with other countries.

# **Section 2**

Any federal agency or department engaged in activities supporting, monitoring or in any way related to farm and ranch price support mechanisms shall be closed and all federal employees in those departments shall be terminated by December 31, 2030.

#### Section 3

No Federal agency may purchase any crop, beef, pork, fish or poultry product unless such purchase shall be shipped overseas as free foreign aid or to be destroyed because of disease. Any purchases made by the federal government shall be at the most recent thirty-day average purchase price for that commodity as established by U.S. commodities markets.

## **Section 4**

No price support, subsidy or other form of payment to farmers or ranchers including new credit mechanisms, except as noted in Section 1, may be made in any form unless presented in a new Bill with that as its only subject and content and then passed by a sixty percent majority of both the House and the Senate of the United States.
