

## **TIPS**

The YCDI is not a rototiller. It will function well in areas that are already set up for planting or have plants actively growing. **NOT FOR USE** to break up clay or granite soils.

To install plants beneath weed cloth: Make an “x-shaped” cut where you wish to plant, place the You Can Dig It! over the cut on the fabric and drill in. There is a perfect, precise hole to install your plants.

You Can Dig It! (TM) is particularly suited to planting continuous patterns of plant color or design; such as around a mall or hotel entrance, lobby entrances, planters, parking medians; wherever dramatic splashes of color are used to attract clientele. Excellent for compact areas, pots, slopes, rock gardens.

The YCDI! Tool may exhibit signs of rust when exposed to moisture. It is made of steel so will last a lifetime. You can spray or rub a little oil on it to keep it rust-free.

The You Can Dig It! is ideal for augmenting existing planters and compact areas since the tool does not rip through adjoining plants. Effective for adding accent plants (Ivy, Bacopa, Lamium, Impatiens) to pots and small areas quickly and cleanly.

The YCDI ! is not recommended for kitchen use. The metal is not suitable for processing food.
