

Cedar Mountain RVI Announces Formation of New Mobile Solutions Division

CHANTILLY, Virginia - February 1, 2018 - Cedar Mountain RVI, a provider of RV mobile repair services throughout the mid-Atlantic region, also a contractor for RV Armor lifetime warranted roofing and Truma's AquaGo hot water heaters, today announces the formation of a new mobile solutions division - Cedar Mountain Connex.

Cedar Mountain Connex will focus on delivering a range of mobile solutions for LTE cellular and WiFi based connection to the Internet for RV owners.

With increased interest in the outdoor lifestyle by a younger demographic, and ever increasing demand by them and others for connection to the Internet, Cedar Mountain Connex will specialize in a wide range of solutions from simple WiFi devices, such as the WiFi Ranger, or satellite dishes, or more intelligent and remotely managed LTE cellular routers from Cradlepoint and Peplink utilizing high gain antennas.

Service providers AT&T, Verizon Wireless and T-Mobile have stepped up their delivery of high speed 4G/LTE with unlimited cellular data service plans to meet this increased demand. Wayne Hulit, CEO of Cedar Mountain RVI, said "Cedar Mountain Connex will take a lead in promoting LTE cellular based strategies so that RVers can, so to speak, 'kiss the sky' to stay connected to the Internet."

Cedar Mountain Connex recognizes that enjoying the outdoors lifestyle also means staying connected to the Internet responsibly to keep a work-lifestyle balance. To maintain that balance, RVers and homeowners alike need connection to the Internet to access services such as online banking, teleworking, social networking, home security, news feeds, telehealth, video streaming, gaming, and an unparalleled explosion of Apps for personal and business convenience.

Many full time RVers also run businesses which need to be connected to the Internet to operate. Cedar Mountain Connex will provide those connections.

In the coming weeks, Cedar Mountain Connex will launch a completely new website describing the products and services it will provide as well as useful information on how to keep work and lifestyle in balance while being connected to the Internet.
