

WATER QUALITY MANAGEMENT

Environmental authorities and operational license provisions require that operations that impact on surface and ground water quality institute suitable programs to ensure compliance are maintained. Furthermore human exposure to contaminated potable water can present a serious health risk.

Field HSE provide water quality sampling and reporting for;

- Physico-chemical Parameters
- Microbiological Contamination
- Chemical Contamination
- Mine Site Water Release/Storm Water Sampling
- Potable Water Testing to ADW Guidelines
- Ground & Surface Water Sampling
- Standing Water Level

Field HSE utilise NATA accredited laboratories for water quality analysis with quality endorsed sampling and chain of custody procedures.
