

# Screening for Eating Disorders

Grace Melrose, RDN  
Nutrition Director

Rosewood Centers for Eating Disorders

1

---

---

---

---

---

---

---

---

# Agenda

- ▶ Overview of eating disorders; Review Malnutrition
- ▶ Screening Tools / Diagnosis / Medication
- ▶ Closer look into ARFID & binge-eating disorder
- ▶ Recognize signs and symptoms associated with eating disorders
- ▶ Review Levels of Care; Common Referral Sources

2

---

---

---

---

---

---

---

---

# A few Truths About Eating Disorders

- ▶ Many people with eating disorders look healthy yet may be extremely ill.
- ▶ Eating disorders carry an increased risk for both suicide and medical complications.
- ▶ Genetics and environment play important roles in the development of eating disorders.
- ▶ Full recovery from an eating disorder is possible. Early detection and intervention are important.

3

---

---

---

---

---

---

---

---

## Eating Disorder Forms

- ▶ Anorexia Nervosa
- ▶ Orthorexia\*
- ▶ Bulimia Nervosa
- ▶ OSFED (other specified feeding or eating disorder)
- ▶ EDNOS (Eating Disorder not otherwise Specified)
- ▶ Diabulimia\*
- ▶ ARFID
- ▶ Binge-eating Disorder

4

---

---

---

---

---

---

---

---

## Anorexia Nervosa

- ▶ **Restriction** of energy intake that leads to a significantly low body weight in the context of age, sex, development and physical health
- ▶ Intense **fear** of gaining weight or becoming fat, even when underweight
- ▶ Disturbance in the way in which one's body weight or shape is experienced, or denial of the seriousness of the current low body weight. **Poor body image**
- ▶ Atypical anorexia includes those individuals who meet the criteria for anorexia but who are not underweight despite significant weight loss.
- ▶ Mild, Moderate and Severe Protein-Energy Malnutrition is present

5

---

---

---

---

---

---

---

---

## Clinical Diagnosis can be used for all disorders eating disorders

### Two or more symptoms must be present for diagnosis

- ▶ Mild Protein-Energy Malnutrition
  - ▶ NPO >7days or <75% intake for 2 weeks or more
  - ▶ 80-90 of IBW or BMI **17.1-18.5**
  - ▶ Mild weight loss
- ▶ Moderate Protein-Energy Malnutrition
  - ▶ <75% energy intake >1 month
  - ▶ 70-79% IBW or BMI **16.1-17**
  - ▶ Significant weight loss (see table)
- ▶ Severe Protein-Energy Malnutrition
  - ▶ <50% energy intake >1 month
  - ▶ <70% IBW or BMI **<16**
  - ▶ Severe weight loss (see table)
  - ▶ Measurably reduced hand grip strength
  - ▶ Severe muscle or fat loss (visual)

6

---

---

---

---

---

---

---

---

## Physical Screening

- ▶ Hand Region
- ▶ Clavicle Region
- ▶ Temple Region

7

---

---

---

---

---

---

---

---

## Coding for Insurance

- ▶ ICD-10 Titles
- ▶ Primarily used in treatment codes (E43, E44, E44.1, E46)
  - ▶ Mild protein-calorie malnutrition
  - ▶ Moderate protein-calorie malnutrition
  - ▶ Unspecified severe protein-calorie malnutrition
  - ▶ Unspecified protein-calorie malnutrition

8

---

---

---

---

---

---

---

---

## Orthorexia

- ▶ Orthorexia is the term for a condition that includes symptoms of obsessive behavior in pursuit of a healthy diet. Orthorexia sufferers often display signs and symptoms of anxiety disorders that frequently co-occur with anorexia nervosa or other eating disorders

9

---

---

---

---

---

---

---

---

## Orthorexia behavior changes/signs

- ▶ Obsessive concern over the relationship between food choices and health concerns such as asthma, digestive problems, low mood, anxiety or allergies
- ▶ Increasing avoidance of foods because of food allergies, without medical advice
- ▶ Noticeable increase in consumption of supplements, herbal remedies or probiotics
- ▶ Drastic reduction in opinions of acceptable food choices, such that the sufferer may eventually consume fewer than 10 foods
- ▶ Irrational concern over food preparation techniques, especially washing of food or sterilization of utensils

---

---

---

---

---

---

---

---

10

## Bulimia Nervosa

- ▶ Recurrent episodes of binge eating. An episode of binge eating is characterized by both of the following:
  - ▶ Eating, in a **discrete** period of time in an amount of food that is larger than most people would eat during a similar period of time
  - ▶ A sense of **lack of control** over eating during the episode (e.g., a feeling that one cannot stop eating or control what or how much one is eating).
- ▶ Recurrent inappropriate behavior in order to prevent weight gain, such as self-induced vomiting, misuse of laxatives, diuretics, or other medications, fasting, or excessive exercise.
- ▶ The binge eating and inappropriate compensatory behaviors both occur, on average, at least once a week for three months.

---

---

---

---

---

---

---

---

11

## Avoidant/Restrictive Food Intake Disorder (ARFID)

- ▶ Knowns as the "picky eaters" "problem feeder"
- ▶ Restriction is not based around body image
- ▶ DSM-5 criteria: eating or feeding disturbance (subtypes)
  - ▶ apparent lack of interest in eating or food
  - ▶ Avoidance of eating based on the sensory characteristic of food
  - ▶ Concern about adverse consequences of eating (example: fear of choking aka phagophobia) or vomiting
- ▶ Any of the above with 1 or more of the following
  - ▶ Significant weight loss; significant nutritional deficiency; dependence on oral nutritional supplements; marked interference with psychological functioning

---

---

---

---

---

---

---

---

12

## ARFID Continued

- ▶ Can develop the moment the baby starts eating, depending upon the experience
  - ▶ Imperative for providers if you suspect ARFID to get a complete feeding/eating history starting at birth and working to present
  - ▶ Background on growth, were there distractions in the home around meals, eating patterns and attachment
  - ▶ Often missed and little attention to the WHY low appetite/avoiding, early experiences/therapeutic history

---

---

---

---

---

---

---

---

13

## ARFID vs Anorexia and other trends

- ▶ More boys, younger onset
- ▶ Many may already have pediatric therapy
- ▶ **Worry / Pressure** (parental/medical/school)
- ▶ More sensory/texture (sensory subtype)
- ▶ **Fear** of choking/vomiting common
- ▶ Anxious about sugar, pesticides, GMOs, chemicals
- ▶ Anxiety about "eating clean"

---

---

---

---

---

---

---

---

14

## ARFID Treatment

- ▶ Trauma/Coercion
  - ▶ May be around food early childhood
    - ...I was forced to sit until I ate. I pooped myself cus I thought I wasn't allowed to use the bathroom"
    - ...my dad berated my brother for pouring too much ketchup. He sobbed while Dad forced him to eat it wit a spoon
    - ...I sat at the table "till I fell asleep and got spanked for not eating, still have problems with those foods"
- ▶ Working on not being "pressured" focus on improving the anxiety this will improve intake

---

---

---

---

---

---

---

---

15

## Binge Eating Disorder

- ▶ Binge eating episodes are associated with three (or more) of the following:
  - ▶ Eating much more rapidly than normal.
  - ▶ Eating until feeling uncomfortably full.
  - ▶ Eating large amounts of food when not feeling physically hungry.
  - ▶ Eating alone because of feeling embarrassed by how much one is eating.
  - ▶ Feeling disgusted with oneself, depressed, or very guilty afterward.
- ▶ The binge eating occurs, on average, at least once a week for 3 months.
- ▶ **KEY:** binge eating is not associated with the recurrent use of inappropriate compensatory behaviors (e.g., purging) as in bulimia nervosa

---

---

---

---

---

---

---

---

16

## Common Signs and What to ask

- ▶ Have you ever used food to cope?
- ▶ Transgender population higher at risk; LGBTQIA
- ▶ Do you eat at night out of habit?
  - ▶ Avoiding food all day then overeating
  - ▶ Eating in secret
- ▶ How do you manage your stress? Is there feeling of depression, guilt or disgusted with oneself after overeating?
- ▶ Yo-Yo dieting
- ▶ Eating large quantities until uncomfortably full, even when not hungry
- ▶ Recurring episodes of uncontrollable eating
- ▶ Previous addiction; smoking cessation
  - ▶ Addict Brain (dopamine/serotonin affected)

---

---

---

---

---

---

---

---

17

## BED: Driven by the Internalized Thin Ideal

- ▶ Advertising / Social Media /Culture
- ▶ Diet Industry has increased to 66.3 Billion
- ▶ Public Health "Obesity" Campaigns
- ▶ Food Confusion: Good and Bad Food
- ▶ "Health" Confusion
- ▶ Food Trends
- ▶ Fashion Industry
- ▶ Stress / Over worked

---

---

---

---

---

---

---

---

18

## Ways to treat BED

- ▶ Identify top triggers to eating → emotion attached → reframe and practice with new skill
- ▶ Dialectical Behavior Therapy (DBT)
- ▶ Cognitive Behavioral Therapy (CBT)
- ▶ IF/Then Planning
  - ▶ "If I feel stressed.....then I will eat"
  - ▶ Assists stopping a behavior 60% more effective in changing a negative thought
- ▶ Behavior Chain Analysis
  - ▶ Draw it out in very specific detail; walk through the binge

---

---

---

---

---

---

---

---

19

## Comparative thoughts to self harm

Binge eating → Relief of negative affect  
 In a Similar Way That  
 Self-harm behaviors → Relief of negative affect

- Negative affect is most frequent precursor to binge eating (cf. Greeno, Wing, & Shiffman, 2000)
- Eds, are like suicidal behaviors, may function to regulate affect
- DBT is a skill specifically designed to teach adaptive affect regulation and to target behaviors resulting from emotional dysregulation

---

---

---

---

---

---

---

---

20

## Cognitive Behavioral

---

---

---

---

---

---

---

---

21

## When not to use DBT for Binge Eating/Bulimia

- ▶ With BED or BN clients with:
  - ▶ Severely chronic multiple symptoms
  - ▶ Active suicidality
  - ▶ Combined borderline personality disorder and active substance abuse/dependence
  - ▶ Treatment of choice for above clients is the ORIGINAL comprehensive multimodal DBT program (see, e.g., Wisniewski, Safer & Chen, 2007)

A RoyalMans Health Recovery Program 

22

---

---

---

---

---

---

---

---

## Binge Eating Disorder (BED) and Prevalence

- ▶ BED – 80% have some type of sexual trauma
- ▶ Higher rates of Substance Abuse and Dependence
- ▶ BED goes largely undiagnosed – shame and secrecy
- ▶ 30-40% of those seeking weight loss solutions have BED
- ▶ Still not covered by insurance unless medically complicated
  - ▶ Blood pressure, elevated blood sugar etc.
- ▶ Binge eating or loss-of-control eating may be as high as 25% in post-bariatric patients.<sup>13</sup>

Weight Increases with Time and Severity

- ▶ BED occurs in people of all sizes
- ▶ 19% normal weight
- ▶ 36% overweight
- ▶ 45% obese

23

---

---

---

---

---

---

---

---

## EATING DISORDER RISK FACTORS Conceptualization (3 P's)\*

- ▶ Predisposing Factors
  - ▶ Genetic, Family Environment, the effects of environmental adversity, premorbid psychiatric conditions, cultural and societal pressures
- ▶ Precipitating Factors
  - ▶ Child Abuse, Adversity, Loss, developmental milestones, dieting behavior, body image issues, emotional dysregulation, poverty
- ▶ Perpetuating Factors
  - ▶ Starvation effects from chronic dieting, Unresolved PTSD, and ongoing family dysfunction

\*Brewerton, T. Overview of Evidence on the Underpinnings of Bulimia Nervosa. In: Evidence-Based Treatment for Eating Disorders, 2007.

24

---

---

---

---

---

---

---

---

## Why Discuss?

- ▶ At least 30 million people of all ages and genders suffer from an eating disorder in the U.S. <sup>1,2</sup>
- ▶ Every 62 minutes at least one person dies as a direct result from an eating disorder.<sup>3</sup>
- ▶ About 38% of females and 16% of males with type 1 diabetes have disordered eating behaviors.<sup>4</sup>
- ▶ 16% of transgender college students reported having an eating disorder.<sup>5</sup>

---

---

---

---

---

---

---

---

25

## Why discuss continued

- ▶ ED have the highest mortality rate of any mental illness. The premature death rate associated with ED is **12 X's higher than ALL causes of death for females ages 15-24** and the third most chronic illness among adolescents.<sup>5</sup>
- ▶ *It is a progressive illness. 5-10% of anorexics die within ten years of onset, 18-20 % die within twenty years of onset, and only 50 % report ever being cured.* APA Practice Guidelines
- ▶ The average age of ED sufferers is dropping (as young as elementary school), with peak onset among **girls ages 11-13.**
  - ▶ American Academy of Child & Adolescent Psychiatry

---

---

---

---

---

---

---

---

26

## Co-Occurring Disorders

### Key presentations:

- ▶ Anxiety – meal times
  - ▶ OCD – food rituals or EDBs
  - ▶ Depression – increased desire for exercise
  - ▶ Substance abuse
  - ▶ PTSD – food traumas
  - ▶ Borderline Personality
- 33-50% of anorexia patients have a comorbid mood disorder, such as depression.
- Mood disorders are more common in the binge/purge subtype than in the restrictive subtype.<sup>12</sup>
- About half of anorexia patients have comorbid anxiety disorders, including obsessive-compulsive disorder and social phobia.<sup>12</sup>

---

---

---

---

---

---

---

---

27

## Multidisciplinary Assessments

- ▶ Medical
- ▶ Nursing
- ▶ Dietary
- ▶ Psychological
- ▶ Psychiatric

---

---

---

---

---

---

---

---

28

## Treatment Priorities

- ▶ Medical stabilization
- ▶ Nutrition Stabilization
- ▶ Life Threatening Behaviors

---

---

---

---

---

---

---

---

29

## Medical Factors to Consider

- ▶ Bone Health even in Adolescents
  - ▶ Most recent DEXA scan; male and female
  - ▶ Early detection is key; bone loss more common in Anorexia and ARFID patients especially males
- ▶ Gastroparesis – true or secondary
- ▶ EDS or Joint hypermobility syndrome (JHS) - common in ED world
  - ▶ 14 types of EDS with hEDS and HSD more common but mis-understood. General 1 in 5,000 individuals worldwide however last year increase in prevalence of who we serve. 0.9% of our patients 2022 had this diagnosis. Maybe not so rare? 17/305

---

---

---

---

---

---

---

---

30

## Restoring Identity

- ▶ Our Goal is to help patients find their identity apart from food, weight, size or shape.
- ▶ Heal and stabilize the body
- ▶ Find meaning, value and purpose
- ▶ Find new ways to manage emotions / cope
- ▶ Body neutrality → Body Positive

---

---

---

---

---

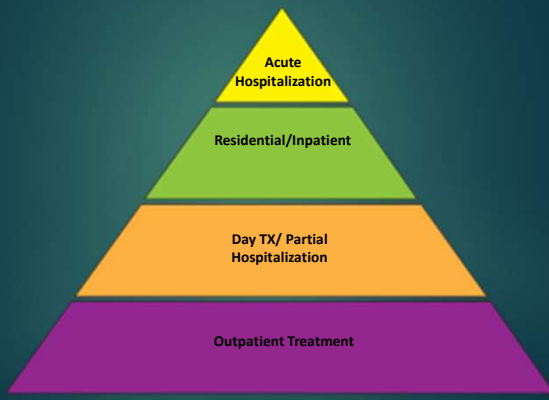

---

---

---

31

## Treatment Setting Options

---

---

---

---

---

---

---

---

32

## Referral Programs and Education

Denver Acute - Colorado  
 Eating Recovery Center (ERC) – All Levels of care in CO, TX  
 Alsana - Missouri  
 Fairwinds – Clearwater Florida  
 Linden Oaks – Illinois  
 Monte Nido Sites – Clementine

# Rosewood Programs and Levels of Care

## Wickenburg, Arizona

- ▶ Rosewood Ranch Inpatient & Residential (Adult & Adolescents)
- ▶ BED Track (6 week design - 3 weeks Residential, 3 week PHP)
- ▶ Addiction Track
- ▶ Diabulimia Program with CDCES/diabetes educator on staff

## Tempe, Arizona

- ▶ Rosewood Tempe Partial Hospitalization Program (Adult) + TL female bed only
- ▶ Rosewood Tempe Intensive Outpatient Program (Adult and Adolescent)

## Scottsdale, Arizona

Rosewood Scottsdale Adolescent RTC all genders Opening Summer 2023

Arizona Virtual PHP & IOP Adults and Adolescents all genders
