Test Comments: *Some big rainfall events created significant ponding that caused major stand loss in most full-season test plots. The early-season test had no to moderately low stand loss. Many hybrids demonstrated tremendous ear flex to compensate for missing plants, other hybrids did not. At harvest, the crop stood well but stalk quality was weakening from being fully mature and light disease pressure.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
