

**International Society of Automation**  
*Delhi Section*

## Cyber Secured Digital Transformation Symposium

**Date:**

Saturday the 16<sup>th</sup> Sep 2023

**Venue:**

Scope Complex, Lodhi Road,  
New Delhi (HYBRID)

**ON popular demand, once again** ISA Delhi Section is hosting a ONE-DAY SYMPOSIUM – A CONFERENCE cum EXHIBITION Event, focused on the CYBER SECURITY technology for Indian Process and Manufacturing Industries.

The Hybrid Conference (Physical as well as Interactive Virtual telecast) will bring together leading experts and thought leaders sharing the latest insights exclusively for the participants on this challenging theme, which will include:

- Government norms, Directives & Regulatory compliances for critical sector OT.
- IT and OT convergence.
- Government Entity and End User perspectives.
- Technology Solutions and Demonstrations.
- Panel Discussion on Practical Implementation.

## **ABOUT THE EVENT**

Digital Transformation has become vital for sustained business opportunities that are changing at a rapid pace. This changing business scenario to digital is no exception even for the Energy Sector. Digitalization has become the backbone for infrastructure in making industry operations more efficient, manageable, and sustainable. Digital transformation has given many advantages and at the same time, increased automation means increased vulnerability of critical infrastructure to Cyber-attacks.

Today, the ISA/IEC 62443 series of standards define requirements and processes for implementing and maintaining electronically secure Industrial Automation and Control Systems (IACS). These standards set best practices for security and provide a way to assess the level of security performance. Their approach to the cyber-security challenge is a holistic one, bridging the gap between operations and information technology as well as between process safety and sets cyber-security benchmarks in all industry sectors that use IACS.

This Conference cum Exhibition will be a great opportunity for:

- Policy makers,
- Regulators and Decision makers,
- CII asset owners,
- Service providers and Product suppliers,
- Industrial Automation fraternity
- Academia and researchers, consulting firms and entrepreneurs.

## **Conference topics:**

1. Critical Information Infrastructure Identification (CII) and security design of CII.
2. Government norms, Directives & Regulatory compliances for critical sector OT.
3. Security by design including supply chain security.
4. ISA secure and cybersecurity testing labs in India.
5. IT-OT convergence and hard isolation.
6. Incident handling and response.
7. Mapping of cybersecurity standards with different CII requirements.
8. Cybersecurity capability Maturity Model, performance goal and zero trust framework.

# Glimpses of Cyber Security Conference 2022:

Please do let us know if you need any further details. Looking forward to your valued response & participation.
