

Program #3 - Aggressive B-Cell Lymphomas: Clinical Application of New Advances in Community Practice

Credits: AMA, ANCC, ACPE

Learning Objectives:

- Order and interpret molecular profiling for appropriate patients with aggressive B-cell lymphoma to guide therapy selection
- Select treatment regimens for patients with MCL and DLBCL based on available clinical data, disease characteristics, and individual patient goals and preferences to optimize clinical outcomes
- Identify patients with aggressive B-cell lymphoma who would likely benefit from enrollment on a clinical trial
- Mitigate, monitor, and manage adverse events associated with newer therapeutic regimens used in the treatment of aggressive B-cell lymphomas
