

Envirotech Gates

Custom Water and Waste Water Gates

Top quality at competitive prices

1000 SLG Sluice Gates:

The Envirotech sluice gate meets and exceeds the requirements of the AWWA standard for stainless steel slide gates. Our gates are hand crafted out of 304L/Stainless Steel. Our patented bronze seals shear any debris that may get caught during the open and close motion. Gates range from 8 to 156 inches.

2000 SG Slide Gates:

Our slide gates feature a patented UHMWA polyethylene slide system. These gates also feature our self-cleaning rail system. Slide gate designs are either self-contained or conventional and surface mount or embedded type. Our slide gates can be open/close or modulated service.

3000 WG Weir Gates:

Weir gates are used to control water flow in different applications by opening downward and holding an elevation of water column or metering water flow by allowing flow over the stainless steel disc.

4000 FG Flap Gates:

Flap gates are the simplest way to prevent water from returning back into pipes and openings. The gate is designed so that whatever the size, a small flow will open the gate with unseating pressure and will remain watertight with seating pressure.

5000 STG Stop Gates:

Stop gates are designed to block water flow in an open channel and are available in almost any size. They are manufactured to be sturdy and include reinforcements to limit deflection of the disc under the design head condition. The disc will have one or two hand holes for removal of the stop gate disc.
