The BOM (Broadcasting Outer Module) is an aerodynamic pod that mounts under the wing of the aircraft. All components are incorporated into the BOM, making it a fully independent, completely wireless, all in one avionic device. The BOM is a platform for innovation, setting the stage for the future of aviation

- * Powered on/off with the vibration of the aircraft
- * Self powered and self-charging
- * NORSEE certification (Pending) Patent (Pending)
- * Fully independent backup system
- * Open source platform offering the most compatibility

AVIONICS REIMAGINED
