JKLM ENERGY, LLC TO PROVIDE
DAILY UPDATES TO COMMUNITY ON PROJECT WEBSITE
*No Isopropanol Present in Five of Six
Initial Well Water Samples Closest to Drilling Location*

WEXFORD, Pa (Sept.25) – JKLM Energy, LLC today announced plans to issue daily updates to the public regarding the release of drilling chemicals at its Sweden Township, Potter County wellpad. These updates, along with previous press releases and related information will be available at www.northhollowresponse.com, beginning at 4:00 PM today.

As of September 24, 2015 JKLM Energy, LLC received lab results from six water sources that had potential groundwater contamination. These results included four of the five private water wells with foamy characteristics for the presence of isopropanol, the chemical of principal concern in the incident, which was not detected in those four wells. The material was also not detected in a sample collected from a spring located in the area of the investigation.

The private well with foam closest to the drill site contained 15 ppm (parts per million) isopropanol, which is at the Act 2 standard for aquifers serving residential uses, the threshold for state drinking water standards. These sampling results are consistent with the belief that the aquifer would continue to disperse and degrade the isopropanol as it is transported through the aquifer by means of normal water flow.

JKLM attended a Sept. 24 public meeting at the Gunzburger Building in Coudersport to inform local officials and citizens about the release and to answer any questions and concerns that they had. The company is continuing to test water wells and sources in the potentially affected area and will keep the public apprised of the general lab results as they are received. Due to privacy concerns, JKLM will not disclose property-specific water well results without the permission of the property owner. The company also took water samples regarding potential concerns at the Hershey Pond, located just off of Route 6 east of Coudersport. JKLM is continuing to work closely with local officials as well as the Pennsylvania Department of Environmental Protection to limit the release's impact to the community and restore the local water aquifer to pre-drilling quality.

Local residents with questions may contact Dean Boorum, JKLM's community liaison, at (814) 598-3960.
