

## Whiskey Dispenser

### Description:

For awhile, I have searched for a working whiskey dispenser. The ones that I have found either were not functional at all or leaked. I finally decided to make my own.

The homemade Brass Whiskey Dispenser pictured is fully operational and does not leak. It has the perfect stream to fill up a shot glass without making a mess all over the bar. The dispenser is fully handmade by me. I recommend using the Jack Daniels 750ml bottle. Other bottles may fit as well if they have the same size and threaded opening, but I know for certain this one will not leak. The wooden base will slightly differ then that pictured.
