Blood Filtration Power Lifter

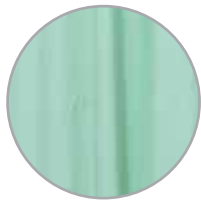

The Blood Filtration Power Lifter® effortlessly lifts collection bags using a foot pedal operated pneumatic system. The hanger assembly attaches blood collection bags and leuko-depletion filters to produce the filtered product. Blood components are then collected in removable segmented bins at the base.

The rechargeable battery system will not operate during charging. This feature eliminates trip hazards during procedures and requires establishing a recharge schedule in order to prolong battery life.

About the E-Lock

The non-audit E-Lock is equipped with a ½" dead bolt, a usage indicator, low battery indicator, tamper guard and a programmable automatic unlock. The programming key initializes the lock and adds manager keys. The manager key opens the lock, changes the combination even when the existing code is forgotten and opens the lock when the batteries have been depleted and need to be replaced.

Recommend one Programming and Manager Key per facility - Additional Manager Keys may also be added
