CHELATED IRON – CURES AND PREVENTS IRON DEFICIENCIES IN THE SOIL

DESCRIPTION

Chelated Iron is a nourishing mineral supplement that easily provides an absorbed form of iron which prevents or cures iron chlorosis in turf, trees and ornamental shrubs. It may be applied directly onto foliage or into the soil.

FEATURES

- **STAYS IN THE SOIL FOR EXTENDED FEEDING**
- **IMMEDIATELY AVAILABLE TO VEGETATION**
- **REDUCES THE PALE GREEN OR YELLOW DISCOLORATION ASSOCIATED WITH CHLOROSIS**
- **COMPATIBLE WITH TANK MIXES OF MOST FERTILIZERS, INSECTICIDES FUNGICIDES AND PENETRATING AIDS**

USE AND DIRECTIONS

TURF AREAS: Dilute 5-10 gallons with sufficient water to cover 1 acre. Small area may be foliar fed with 8 ounces with sufficient water to spray 1,000 sq ft

TREES AND ORNAMENTAL SHRUBS: For root feeding, use 4 ounces per inch of trunk diameter. Dilute with 5-10 gallons of water and pour or inject the solution around the root zone and drip line
