

Ammunition Not Permitted

There are certain types of ammo that are strictly prohibited and are not allowed to be used on the range.

- Tracers
- Explosive Type Ammo
- Incendiary Ammo
- Armor Piercing Ammo

Permitted Targets

The shooter will normally supply his/her own targets. The shooter may use a club provided target stand and backer to affix the target to by using tape, staples or push pins or self-adhering targets. Target stand and backers are provided free for use. To decrease the likelihood of ricochets, shooters may not use metal targets or target frames except as permitted below. Target stands and backers are to be made from wood, PVC and/or cardboard or other type of material that will not cause bullet ricochets. The maximum height of any target must be 5 feet to the top edge. Target stands up to 6 feet in height may be used for 7 yards off-hand pistol shooting ,however, they will not be provided. Non-metal containers such as plastic jugs may be used as targets provided the shooter cleans up all debris afterwards.

The front of the bullet berm is 170 yards from the firing line and has lines striped into sections of four lanes each. Shooters should use these lines to place targets directly in-line with their shooting location. This will prevent cross range shooting and cross shooting into other shooters target stands. The RSO's should watch the placements of the targets and help the shooter to make placement corrections as needed. Targets must be placed in a manner that ensures no bullet strikes the ground closer that the 25 yard distance.

Many target types are permitted, including:

- Paper targets on target stands
- Clay Pigeons if set on the rifle range 200 yard dirt backstop, 170 yard berm or pistol range 50 yard berm and placed no higher than 7 feet from the ground
- Specific groups may use other target types during authorized competition shoots approved by the BOD
- Paper or plastic containers with or without water at 25 yards or farther provided the shooter removes of debris afterwards
- Rubber self healing reactive targets must be placed at a minimum of 25 yards and must not be allowed to move at such an angle as to allow for cross angle shooting into another lane
- Steel reactive targets suspended from a non-metal frame (in good repair) for rimfire pistols/rifles, muzzle loading black powder rifles/pistols and black powder cartridge rifles and firing low velocity all lead bullets. These targets must not be placed closer than 25 yards from the firing line and must pivot so that impacting bullets are deflected downward only. There are new provisions for falling steel targets used with muzzle loaders which is outlined in it's own section.
