

Mobile Indicator QUICK START GUIDE for iOS

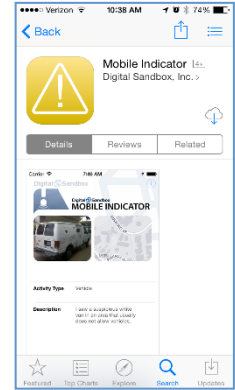

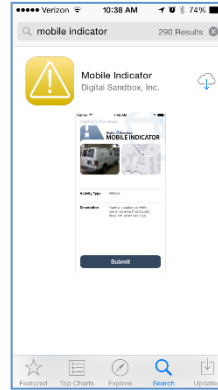

The Mobile Indicator is an application for the iOS platform. It is assumed that you have an iPad or iPhone properly configured to connect to your AppleID and that you have a data connection (cellular or WiFi). You must also have a proper Constellation login (username, password).

1. DOWNLOAD THE APP

Connect to the App Store by running the App Store application.

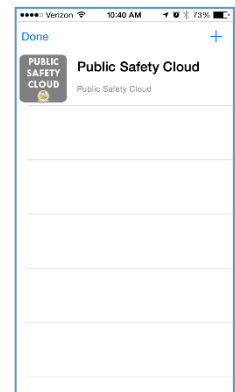

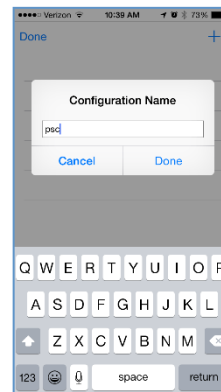

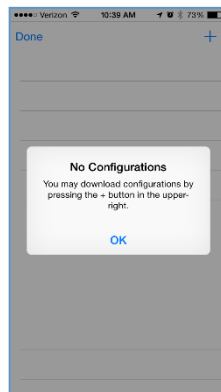

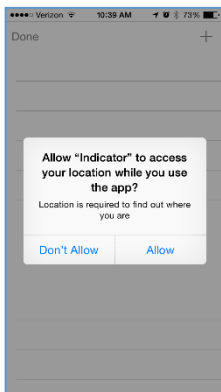

Search for "Mobile Indicator" and find the Mobile Indicator application (developed by Haystax Technology, Inc.). Click on the button that indicates "FREE" and then "INSTALL APP". You may need to enter your AppleID password to complete the download.

2. LAUNCH THE APP

Touch the Mobile Indicator icon to launch the application for the first time. It will prompt you to allow the app to access your location. Select "Allow". Next, the app will inform you that there are no configurations loaded.

Press "Ok" and then press the "+" button in the upper right to enter a new configuration. Enter "tampacert" for the configuration name. The app will then pull down the Mobile Field Reporter configuration onto your device. Press on the new entry once it appears in the list and specify your Constellation Username and Password (as seen below). You can enter your Name, Email, and Phone number also. Then click "Done" at the bottom right and "Done" again in the top left. After specifying your credentials, the main screen will load.

3. USING THE APP

You are now ready to use the app. Take a photo, select an activity type, enter a description and click "Submit". You may take a live photo or choose from an existing photo in your camera roll.
