## THINK Control Unit

The THIKS control unit can be used to control 1 single-phase, 230Vac motor or 1 three-phase, 400Vac motor with power not exceeding 800W for single-phase motors and 2200W for three-phase motors.

### GENERAL WARNINGS

- a) The wire connections and the operating logic should be in compliance with regulations in force.
- b) The cables featuring different voltage should be kept detached, or adequately insulated by an additional insulation of at least 1mm.
- c) The cables should be further fastened in proximity to the terminals.
- d) Check all connections before powering the unit.
- e) Normally Closed inputs which are not in use should be short-circuited.
- f) The Power supply mains should be connected to an omnipolar switch with contact opening distance of 3mm, or higher distance. Check that upstream the electric system is provided with an adequate differential switch and an overcurrent switch.

### INPUT/OUTPUT FUNCTIONS

| THINK Control Unit |                               |  |
|--------------------|-------------------------------|--|
| Terminal No.       | Function                      | Description  |
| 1-2-3              | Motor                         | Connection, 230Vac motor - single-phase:<br>1-Movement+capacitor/2-Common/3-Movement+capacitor<br>Connection, 400Vac motor - three-phase:<br>1-U/2-V/3-W<br>Check that the voltage selection jumper on terminals 36-37-38 is correctly positioned.   |
| 4-5                | Flashing light                | Connection of flashing light, 230Vac 40W max.<br>Connect a negative electric brake to this output.   |
| 5-6                | AUX                           | WARNING: Output, 230Vac 0,5A max.  |
| 7-8                | Auxiliary capacitor           | Free N.O. (Normally Open) contact (10A max) for pickup auxiliary capacitor.<br>See wire diagram. At each start-up the contact is closed for 1.5 sec.   |
| 9-10               | Courtesy light                | Free N.O. contact (2A 150W) to control the Courtesy light which is timed according to the TLS parameter.   |
| 11-12              | 24Vac                         | Output, accessory power supply 24Vac/0,5A max  |
| 13-14              | SCA/PhotoTest                 | Output, 24Vac/0,5A max. This can be preset as open gate indicator light or as checked devices power supply (PhotoTest) through the TSTP logic.<br>In the event of presetting as PhotoTest, please refer to the diagram "Connection of checked safety devices"  |
| 15                 | COM                           | Common for limit switches and photocells   |
| 16                 | SWO                           | Input, OPEN limit switch (N.C. contact)  |
| 17                 | SWC                           | Input, CLOSE limit switch (N.C. contact)   |
| 18                 | PHOT 1                        | Input, Photocell 1 (N.C. contact). It can be disabled in the opening phase, see PHO1 logic.  |
| 19                 | PHOT 2                        | Input, Photocell 2 (N.C. contact). It can be disabled in the opening phase, see PHO2 logic.  |
| 20                 | PHOT 3                        | Input, Photocell 3 (N.C. contact). It can be disabled in the opening phase, see PHO3 logic.  |
| 21                 | PHOT 4                        | Input, Photocell 4 (N.C. contact). It can be disabled in the opening phase, see PHO4 logic.  |
| 22                 | STOP                          | Input, STOP push-button (N.C. contact)   |
| 23                 | OPEN                          | Input, OPEN push-button (N.O. contact).  |
| 24                 | CLOSE                         | Input, CLOSE push-button (N.O. contact)  |
| 25                 | PED                           | Input, pedestrian push-button (N.O. contact)   |
| 26                 | Step-by-step                  | Input, step-by-step (N.O. contact)   |
| 27                 | COM                           | Common for all other control inputs.   |
| 28-29              | DAS                           | Input, safety edge contact.<br>Resistive edge: closed "DAS" jumper.<br>Mechanical edge: open "DAS" jumper.<br>When the safety edge is activated, the gate movement stops. The gate movement is reversed for approximately 3 sec if the INVA logic is ON. If no safety edge is used: "DAS" Jumper open, jumper between terminals 28-29. |
| 30-31              | Aerial                        | Connection of the antenna to the receiver extractable board (30-signal/31-screen).   |
| 32-33              | 2 <sup>nd</sup> radio channel | Output, 2 <sup>nd</sup> radio channel of the two-channel extractable receiver.   |

|          |                                 |   |
|----------|---------------------------------|---|
| 34-35    | SAFETY                          | Emergency stop connection. <b>WARNING:</b> Mains power supply.<br>Remove the jumper and connect a N.C., changeover switch, suited for the mains voltage.<br>See wire diagram. |
| 36-37-38 | Selection of Mains power supply | Selection of power supply voltage, short-circuit:<br>36 and 37 for three-phase power supply (400Vac)<br>37 and 38 for single-phase power supply (230Vac)                      |
| 39-40    | Single-phase power supply       | Input, single-phase mains power supply 230Vac/50Hz (39-L / 40-N)  |
| 39-40-41 | Three-phase power supply        | Input, or three-phase mains power supply, 400Vac/50Hz (39-R / 40-S / 41-T).   |

## Programming

The various functions of the control unit can be programmed by using the LCD display provided on the side of the unit and by setting the desired values on the Programming Menu, as described hereunder.

The Parameters Menu allows for the presetting of a digit value to a function, like an adjustment trimmer.

The Logic Menu allows for the activation and deactivation of a function, like the setting of a Dip-Switch.

The special functions follow the Parameters Menu and the Logic Menu and can vary according to the type of control unit or software review.

### To access programming :

- 1 – Press the <PG> push-button, the first Parameters Menu “PAR” appears on the display.
- 2 – Select the desired menu by using the <+> or <-> keys (PAR>>LOG>>NMAN>>RES>>PAR>>....).
- 3 – Press the <PG> push-button, the display shows the first function available in the Menu.
- 4 – By using the <+> or <-> keys select the function to be modified.
- 5 – Press the <PG> push-button, the currently preset value for the selected function is displayed.
- 6 – By using the <+> or <-> keys, select the value which is to be assigned to the function.
- 7 – Press the <PG> push-button and the “PRG” message is displayed. This means that programming has been completed.

### Note:

When upon a Function Menu, press keys <+> e <-> simultaneously to pass to higher menu without making any change.

If <+> and <-> keys are pressed simultaneously when the display is off, the software version of the board is shown.

Keep either keys <+> or <-> pressed to speed up the increase/decrease of values.

After 60 sec wait, the control unit exits the Programming mode and the display switches off.

### Parameters, Logic and Special Functions

In the tables hereunder the single functions available in the control unit are shown.

|                   | MENU                              | FUNCTION   | Settable values<br>MIN-MAX-(Default) | MEMO |
|-------------------|-----------------------------------|--|--------------------------------------|------|
| <b>PARAMETERS</b> | <b>t<sub>cA</sub></b>             | Automatic closure time. Active with logic “TCA”= ON only.<br>At the end of the preset time, the control unit sends a closure control signal.   | 1-240-(40s)                          |      |
|                   | <b>t<sub>n</sub></b>              | Motor operating time. The operation time is adjusted during the opening and closing phases of the motor.   | 5-180-(40s)                          |      |
|                   | <b>t<sub>PEd</sub></b>            | The stroke time of the gate leaf is adjusted during the partial opening phase (pedestrian mode).   | 5-180-(10s)                          |      |
|                   | <b>S<sub>nS<sub>o</sub></sub></b> | * The amperometric sensor sensitivity is adjusted in the opening phase. This is operating only with logic AMP:ON.<br>1:maximum sensitivity - 99:minimum sensitivity.<br>The sensor triggering in the opening phase stops the movement immediately.   | 1-99-(20%)                           |      |
|                   | <b>S<sub>nS<sub>c</sub></sub></b> | * The amperometric sensor sensitivity is adjusted in the closing phase. This is operating only with logic AMP:ON.<br>1: maximum sensitivity - 99:minimum sensitivity.<br>When the sensors triggers in the closing phase, the gate stops immediately and a reversion movement (opening) starts for approximately 3 sec. | 1-99-(20%)                           |      |
|                   | <b>t<sub>LS</sub></b>             | The activation time of the courtesy light is adjusted. The contact closes with the beginning of the opening operation. The time counting starts only with gate completely closed.  | 1-240-(1s)                           |      |
|                   | <b>S<sub>AFn</sub></b>            | This is operating only with logic SMOT:ON. The motor protection switch triggering is adjusted. The value is expressed in Amperes.<br>1: triggering of protection switch at 1 Ampere of consumption<br>14: protection disabled.   | 1-14-(6A)                            |      |

### \* WARNING:

An incorrect setting of these parameters may cause danger. Please comply with regulations in force!

| MENU        | FUNCTION  | Settable values<br>ON-OFF-(Default) | MEMO |
|-------------|---|-------------------------------------|------|
| <b>tca</b>  | The automatic closure is enabled or disabled.<br>Off: disabled automatic closure.<br>On: enabled automatic closure.   | (ON)                                |      |
| <b>ibl</b>  | The multi-flat function is enabled or disabled.<br>Off: disabled multi-flat function.<br>On: enabled multi-flat function. The P.P. (Step-by-step) impulse or the impulse of the transmitter has no effect in the opening phase.   | (OFF)                               |      |
| <b>scl</b>  | The rapid closure is enabled or disabled.<br>On: enabled rapid closure. With open gate or gate in the opening phase, the activation of the photocell causes the automatic closure of the gate 3 sec after its activation. This function is enabled only with TCA:ON<br>Off: rapid closure disabled.   | (OFF)                               |      |

|              | <b>InuA</b> | The movement reversion in the event of triggering of the amperometric sensor or the DAS input is activated or deactivated.<br>On: Reversion activated. The activation of the edge or the sensor causes a movement reversion (opening) for approx. 3 sec.<br>Off: Movement reversion not activated. The activation of the edge or the sensor causes the immediate stopping of the gate movement.  | (OFF)                               |      |
|              | <b>SNot</b> | The motor protection switch is enabled or disabled. Its sensitivity is adjusted by SAFM parameter.<br>On: amperometric sensor activated.<br>Off: amperometric sensor deactivated.  | (OFF)                               |      |
|              | <b>doSP</b> | The rapid movement reversion is enabled or disabled after the activation of the photocell in the closing phase.<br>ON: Rapid reversion activated. The movement reversion time, in the event of activation of the photocell, is reduced to approx. 1 sec.<br>To be used only on light-weight and fast doors.<br>OFF: Rapid reversion deactivated. The movement reversion time, in the event of activation of the photocell, is approx. 3 sec. | (OFF)                               |      |

| MENU       | FUNCTION  |
|------------|---|
| <b>rES</b> | RESET of the control unit. WARNING!: This resets the control unit to the default values.<br>When the <PG> push-button is pressed once, the RES wording begins to flash, if the push-button <PG> is pressed once more, the control unit is reset.  |
| <b>nPA</b> | The number of the cycles (open+close) completed by the system is displayed.<br>When the push-button <PG> is pressed once, the first 4 digits are displayed, if the push-button is pressed once more, the last 4 digits are displayed.<br>E.g. <PG> 0012 >>> <PG> 3456: 123.456 cycles were performed. |

### IMPORTANT: Photocell inputs not in use

All photocell inputs are short-circuited by default (PHOT1/2/3/4) with the COM terminal. With this presetting, the control unit can be operated also without photocells.

After connecting and setting the photocells required by the type of system, the inputs which are not in use should be short-circuited to the inputs in use by copying the settings in the PHOx parameter, as shown hereunder:

*1 pair of photocells on input PHOT1, active in the closing phase only:*

| Logic PHO 1 | Logic PHO 2 | Logic PHO 3 | Logic PHO 4 | JUMPERS |
|-------------|-------------|-------------|-------------|---------|
| <b>ON</b>   | <b>ON</b>   | <b>ON</b>   | <b>ON</b>   |         |

*1 pair of photocells on input PHOT1, active in both opening and closing:*

| Logic PHO 1 | Logic PHO 2 | Logic PHO 3 | Logic PHO 4 | JUMPERS |
|-------------|-------------|-------------|-------------|---------|
| <b>OFF</b>  | <b>OFF</b>  | <b>OFF</b>  | <b>OFF</b>  |         |

*1 pair of photocells: active in both opening and closing (PHOT1)  
+ 1 pair of photocells: active in the closing phase only (PHOT2):*

| Logic PHO 1 | Logic PHO 2 | Logic PHO 3 | Logic PHO 4 | JUMPERS |
|-------------|-------------|-------------|-------------|---------|
| <b>OFF</b>  | <b>ON</b>   | <b>ON</b>   | <b>ON</b>   |         |

2 pairs of photocells, active in both opening and closing (PHOT1 e PHOT2)  
+ 1 pair of photocells, active in the closing phase only (PHOT3):

| Logic PHO 1 | Logic PHO 2 | Logic PHO 3 | Logic PHO 4 | JUMPERS |
|-------------|-------------|-------------|-------------|---------|
| <b>OFF</b>  | <b>OFF</b>  | <b>ON</b>   | <b>ON</b>   |         |

2 pairs of photocells, active only in the closing phase (PHOT1 e PHOT2)  
+ 1 pair of photocells, active in both opening and closing phases (PHOT3):

| Logic PHO 1 | Logic PHO 2 | Logic PHO 3 | Logic PHO 4 | JUMPERS |
|-------------|-------------|-------------|-------------|---------|
| <b>ON</b>   | <b>ON</b>   | <b>OFF</b>  | <b>OFF</b>  |         |

### Example of programming

Let us suppose it is necessary to:

- set an automatic closing time (TCA) of 100s
- activate pre-blinking

Perform the operations described below step by step:

| Step | Press | Display      | Notes   |
|------|-------|--------------|---|
| 1    |       | <i>PAR</i>   | First menu  |
| 2    |       | <i>t c A</i> | First function of the first menu  |
| 3    |       | <i>040</i>   | Value currently set for the function selected   |
| 4    |       | <i>100</i>   | Set the desired value with the <+> and <-> keys   |
| 5    |       | <i>PrG</i>   | The value is programmed   |
|      |       | <i>t c A</i> | When programming has been made, the display goes to the function just set                   |
| 6    |       | <i>PAR</i>   | Press <+> and <-> simultaneously to go to the higher menu                                   |
| 7    |       | <i>LoG</i>   | Second menu   |
| 8    |       | <i>t c A</i> | First function of the second menu   |
| 9    |       | <i>PrE</i>   | Press <-> several times to select PRE logic   |
| 10   |       | <i>oFF</i>   | Value currently set for the function selected   |
| 11   |       | <i>on</i>    | Set the desired value with the <+> and <-> keys   |
| 12   |       | <i>PrG</i>   | The value is programmed   |
|      |       | <i>PrE</i>   | When programming has been made, the display goes to the function just set                   |
| 13   |       | <i>PAR</i>   | Press <+> and <-> simultaneously to go to the higher menu and quit programming or wait 30s. |

## Diagnostics

In the event of operating faults, by pressing the + or - keys the status of all inputs can be displayed (limit switches, control and safety). Each input is matched to one segment of the display; in the event of activation, it switches on according to the following diagram.

The Normally Closed (N.C.) inputs are represented by vertical segments. The Normally Open (N.O.) inputs are represented by horizontal segments.

## Error messages

The control unit checks the correct operation of the safety devices.

In the event of faults the following messages can be displayed:

- ERR1** Error, check photocells. Check connections and the correct operation of photocells.
- ERR2** Activation of the anti-crash amperometric sensor. Check the presence of any obstacles.
- ERR3** Check of single failure has negative result. Contact the technical assistance.
- ERR4** Triggering of the motor protection switch. Check the value of the parameter SAFM and check the motor consumption.
- ERR5** Lack of one of the three phases. Check the correct connection of power supply of the three-phase mains.

## Fuses

- F1** Protection fuse, accessories
- F2** Protection fuse, logic board
- F3** Protection fuse, flashing light and electric brake.s
