Re: Draft Target 2 Report Posted

Gas-Electric System Interface Study Target 2 Report Posting

Today the Gas-Electric System Interface Study draft Target 2 Report is being posted on the EIPC website [here](#). Please note that the posting will include a large number of files so the posting may extend over the weekend. If you do not find a particular file, please check back again later.

Critical Energy Infrastructure Information (CEII)

You will notice that the list of appendices to the draft report shows that some contain information that is considered to be Critical Energy Infrastructure Information (CEII). Appendices containing CEII are not posted to the web site, and individuals who wish to have access to that information will need to request it from one of the six regional EIPC Planning Authorities that are participating in the study – ISO New England, IESO, New York ISO, PJM, MISO, or TVA. Requests should follow the procedure posted on the EIPC website at http://www.eipconline.com/EIPC_Documents.html. Such requests will need to include an explanation of why it is appropriate for the individual to receive the information. If an individual does not reside within the boundaries of one of the six participating Planning Authorities, they should choose the participating Planning Authority that is geographically closest to their location.

Project Schedule / Target 2 Webinar

As shown on the revised project schedule

http://www.eipconline.com/uploads/Schedule_of_Stakeholder_Activities_v24_1-16-15.pdf, a webinar will take place on February 12, 2015 to present the report, address questions, and provide an opportunity for stakeholder input. A separate notice for the webinar, including specifics on the webinar address, passcode and dial-in information, will be provided at a later date.

Comments Due

Stakeholder written comments on the draft Target 2 Report will be due February 27, 2015.

As always, if you have questions or comments about the Gas-Electric System Interface Study or other issues involving EIPC, feel free to contact me at the phone number or email shown below. We look forward to your continued participation in the Gas-Electric System Interface Study.

Thanks –

Dave
