

Custom Laser Protocol

Moy Fincher Chipps Facial Plastics & Dermatology

Beverly Hills Most Advanced & Personalized Affront on Anti-Aging

When it comes to correcting and significantly improving the signs of aging, there is no other practice like Moy Fincher Chipps Facial Plastics and Dermatology of Rodeo Drive, Beverly Hills that can truly customize the ideal and most advanced treatment to attain healthy, beautiful skin.

Dr. Ronald L. Moy, Dr. Lisa Chipps, Dr. Helen Fincher and Dr. Edgar Fincher

This powerhouse practice brings together the highly reputable skills of Board Certified dermatologists Ronald L. Moy, MD, Edgar Fincher, MD, PhD, Helen Fincher MD, and Lisa Chipps, MD, MS who have developed a custom laser protocol utilizing state-of-the-art laser technologies including Affirm, Fractional CO2, Laser Resurfacing, IPL, Pelleve, and the new and MFC exclusive fractional Erbium laser, among others.

Unlike most practices that focus on a singular laser technique to treat the visual signs of aging, the doctors at MFC are able to "hand-craft" the best combination of laser treatments based on an individual's needs as well as listening to their personal desires to improve the overall health and appearance of their skin.

Whether the final outcome is an individual laser or a combination laser and/or surgical approach, the

client confidently knows a customized protocol was created specifically for them with the most advanced treatment options selected.

"Every person is unique and over time, each displays their own individual skin profile made up of pigmentation, fine lines, deep wrinkles, loss of elasticity, or loss of volume," explains Dr. Fincher, partner at MFC.

"Our belief is there is no one-size-fits all treatment to attain the best results, but rather a carefully crafted and personalized protocol utilizing a combination of lasers and treatment methods. At MFC, we are able to achieve a greater positive response by pinpointing specific needs with their ideal treatments."

It is exceptional to find so many advanced laser techniques skillfully executed within one practice. Building a strong reputation as custom laser specialists goes hand-in-hand with the shared philosophy of the partners to provide the best possible treatment and care of the skin with health AND beauty in mind.

DNA EGF Renewal Collection. Call 310.274.5372 or visit www.dnaegf.com

"When it comes to skin health and beauty, we strive to provide the best experience, the best results, and the most personal of care to help people attain their personal best," explains Dr. Chipps.

The message is clear at MFC that a healthy and smart approach to skin beauty and anti-aging is essential. Fast becoming the go-to laser specialist in Beverly Hills, MFC also specializes in Mohs Micrographic Surgery, Cosmetic Surgery, and Injectable Fillers to provide clients with an array of options to intelligently turn back the clock.

Treatment protocols take into account the utmost comfort of the patient throughout all stages of the pre and post procedure, speed and ease of recovery, education on safe sun practices, and intelligent care of the skin to maintain results by incorporating an advanced anti-aging skin care protocol, like DNA EGF Renewal™, at home.

The DNA EGF Renewal Collection, researched and developed by Dr. Moy to help restore youthful skin and reverse the signs of aging, works to renew the skin with a highly innovative plant-based growth factor, DNA Enzymes, and innovative actives to smooth, firm, and even skin tone for on-going maintenance of a youthful appearance.

This comprehensive, personal approach to addressing anti-aging resonates with clients who experience exceptional, beautiful results for years to come!
