

What is Your Family Exposure?

- Do you store your cell phone in your pocket?
- Does your child's school have WiFi and ipads?
- Do you give your child your cell phone to play with?
- Do you have a WiFi router at home?
- Do you have a DECT cordless phone at home?

*Answered yes? So did we...
Safe Technology choices can reduce your exposure!*

4 Simple Steps to Reduce Risk

- Carry and Use Cell Phones AWAY from Head and Body.
- Turn Devices on Airplane mode with WIFI OFF.
- Use Wired *Corded* connections for internet connection.
- Get a corded landline phone for your Home.

We parents can't be 100% perfect all the time. We *can* find simple, actionable steps to improve our families health. Let this be your guide to start you on that journey.

Yes. *It is everywhere.* **Yes.** We can do something about it.

"We are convinced that there is nothing less than the future of our children at stake."

Frank Clegg, former President of Microsoft Canada
Leading Advocate for Safe Technology

Don't Freak Out ~ Keep Calm and Take Action.

Is WiFi Safe?

Myth: *Wireless was tested for safety.*

Fact: WiFi and cell phones were *never* tested for long term safety. Medical organizations do not say it is "safe". Physicians and scientists are concerned worldwide.

"Concerns have been raised that long-term RF energy exposure affects the brain and other tissues and may be connected to types of brain cancer, including glioma and meningioma."

-American Academy of Pediatrics

Myth: *WiFi radiation is too low to harm us.*

Fact: Low levels damage the immune system and increase cancer in several research studies. Current US regulations are for 30 minutes of exposure and did not consider daily 24 hour exposure like our kids get now.

Myth: *US radiation safety laws protect children.*

Fact: US regulations are 18 years old and apply to an adult male, not a child. The EPA and FDA have *not* developed federal safety standards *nor* have they done a human health review to determine a safe level.

Fact: Children absorb ten times the wireless radiation in the bone marrow of their skull than adults do.

Fact: Countries are passing laws to protect children and recommend safe technology (not WiFi) in schools because of the scientific evidence showing harm.

Myth: *This radiation has been around for decades.*

Fact: The amount of radiation in our homes is *thousands of times* more than in our past because of the routers and devices we own now. School WiFi routers are industrial strength and emit much far more radiation than a home router.
